1. Introduction

1.1 Project Overview

The Gender and Adolescence: Global Evidence (GAGE) programme is a nine-year (2015-2024) mixed methods longitudinal research and evaluation initiative generating and communicating evidence on 'what works' to support adolescent girls in the Global South to reach their full potential. The programme is funded by the UK Department of International Development (DFID). The GAGE research aims to investigate what works to support adolescent girls' health, education, wellbeing and empowered life trajectories into adulthood. It covers a range of capability domains, including health, bodily integrity, education, voice and agency, and economic empowerment and broader adolescent wellbeing.

GAGE undertakes longitudinal research in seven countries in Africa (Ethiopia, Rwanda), Asia (Bangladesh, Nepal) and the Middle East (Jordan, Lebanon, Palestine). Sampling adolescent girls and boys aged between 10-19 years old, the quantitative survey follows a global total of 18,000 adolescent girls and boys and their caregivers and explores the effects that programme have on their lives. This is substantiated by in-depth qualitative and participatory research with adolescents and their peers. Its policy and legal analysis work studies the processes of policy change that influence the investment in and effectiveness of adolescent programming.

For the baseline study, GAGE will administer a household questionnaire to a sample of adolescents and their female and male adult caregivers to collect information on key aspects of their lives. In addition, GAGE will administer a school questionnaire in the communities of these adolescents to understand their access to health services, education, and exposure to gender norms. The information for the household questionnaire will be obtained by approaching households and collecting detailed information from respondents. The information for the school questionnaire will be obtained by approaching a key school informant such as the principal for that school.

More details on the specific work in Jordan can be found in the following PPT presentations:

1 GAGE Jordan Baseline Training Research Introduction.pdf

1.2 Manual Overview

The purpose of this manual is to describe the study sample and data collection activities, survey instrument organization, completion of the questionnaires (including detailed instructions on specific sections), and final submission of the questionnaire, for the baseline survey data collection. The over-arching objective of this manual is to provide the field staff with key information on how to conduct the survey, the intent of many of the questions, and consequently, how field staff should handle any problems that might arise in survey administration.

1.3 Introduction to Mindset (Jordan country partner)

Mindset is a full-service social and market research firm operating in the Middle East and Africa and offering the full spectrum of research services using quantitative and qualitative methods. Mindset has managed research projects in several sectors and helps its client make informed decisions, identify opportunities, and increase the effectiveness of their interventions or strategies. Mindset uses

rigorous research designs and advanced research tools that guarantee quality and facilitate the collection of rich and impactful data. It currently serves clients in five countries: Jordan, KSA, UAE, Palestine and Nigeria.

1.4 Team Overview

The field staff for the baseline survey will vary across the country. It is critical that everyone know their role. For detailed team overviews by country please see the following document:

7 GAGE Jordan Baseline Training Data Management.pdf

2. Survey Sample

This section discusses the process by which households will be selected into the GAGE study. This section first discusses eligibility for the study at the community, household, and individual level. It then goes into more detail on the listing procedures that will be used to identify eligible households.

2.1 Sample Selection

Broadly speaking, the households eligible for the GAGE survey must have an eligible core respondent. Eligible CRs are 10-12 (Young CR) or 15-17 (Old CR) year old boys and girls. The number sampled in each of these cohorts varies by location.

For a detailed description of the specific sampling approach in Jordan please refer to the following files:

2 GAGE Jordan Baseline Training Research Sample.pdf

There are three main questionnaires included in the GAGE baseline data collection activity (discussed in more detail below):

1. **Adult Female (AF) Module:** This questionnaire is administered to the adult female (AF) in the household who is most responsible for caregiving and decision making for the Core Respondent (CR). It is critical that we do our best to find the primary decision maker for the Young CR. For the Old CR, while we still prefer the primary female decision maker, it is okay if an adult male or other informed female answers the module (or even the CR in rare cases, see the table on Respondent Scenarios in **Section 3.7**). This module captures key characteristics of the household, as well as details of the Adult Female. This module will take approximately 2.5 hours for the AF of the Young CR and approximately 1 hour for the AF of the Old CR.
2. **Core Respondent (CR) Module:** This questionnaire is administered to the selected 10-12- or 15-17-year-old adolescent (including those sampled for the disability sample) and focuses on multiple dimensions of his/her life. There are two versions of the CR – one for the Young CR and one for the Old CR. For the Young CR, this module will take approximately 1.5 hours. For the Old CR, this module will take 2 Hours.

3. School questionnaire: This questionnaire is administered to a key school official for selected schools in the community. It will be conducted by a supervisor and will take approximately 1 hr.

2.2 GAGE Households

The household, adult female decision maker and the core respondent are the main units of the GAGE survey.

Household Definition

A household may be either a person living alone or a group of people, either related or unrelated, who live together as a single unit in the sense that they have common housekeeping arrangements (that is, share or are supported by a common budget). A standard definition of a household is “a group of people who live together, pool their money, and ‘eat from the same pot’”. It is possible that individuals who are not members of the household may be residing with the household at the time of the survey. In most cases, but not all, someone who does not live with the household during the survey period is not a current member of the household.

It is important to recognize that members of a household need not necessarily be related by blood or by marriage. On the other hand, not all those who are related and are living in the same compound or dwelling are necessarily members of the same household. Two brothers who live in the same dwelling with their own wives and children may or may not form a common housekeeping arrangement. If they do not, they should be considered separate households.

One should thus make a distinction between *family* and *household*. The first reflects social relationships, blood descent, and marriage. The second is used here to identify an economic unit. While families and households are often the same, this is not always the case.

In the case of polygamous men and extended family systems, some household members are distributed over two or more dwellings. If these dwelling units are in the same compound or nearby (but necessarily within the same enumeration area) and they have a common housekeeping arrangement with a common household budget, the residents of these separate dwelling units should be treated as one household.

Household Head Definition:

The Household Head is the person commonly regarded by the household members as their head. The head is often, but not always, the main income earner and main decision maker for the household, but interviewers should accept the decision of the household members as to who is their head. There must be one (and only one) head of the household. If more than one individual in a potential household claims headship, or if individuals within a potential household give conflicting statements as to who is the head of household, it is very likely that the interviewer is dealing with two or more households, rather than one. In such cases, it is extremely important that the interviewer apply the criteria provided above to delimit membership in the survey household.

Note that it is possible that the household head may not be residing in the dwelling at the time of the interview. He or she may be living and working, temporarily or permanently, elsewhere (either within the country or in another country). This is permitted. However, other individuals who do not

reside in the household at the time of the survey should in most cases not be listed on the GAGE Household Roster (except if they are a temporary migrant).

Female Decision Maker Definition:

The GAGE AF Module will be conducted with an adult female who is the female decision maker for the core respondent (except in a few exceptions discussed in more detail below, see **Section 3.7**). The female decision maker is the adult female in the household most responsible for decisions regarding the selected core respondent. The reason that the AF Module is conducted with this individual is because it not only captures core household information, but also collects detailed data on the behaviors and outcomes of this female (for the Young CR). If the adult female is not the household head, she will be able to have the household head assist her in certain sections of the survey where the household head may be more knowledgeable.

2.3 GAGE Core Respondent

There are two cohorts of Core Respondents: **Young Cohort CRs** and **Old Cohort CRs**. The **Young Cohort CR** for the GAGE baseline survey is a boy or girl who is 10 to 12 years old at the time of listing. The **Old Cohort CR** for the GAGE baseline survey is a boy or girl who is 15 to 17. In some locations we are only working with one of these two cohorts. For purposely sampled female adolescents who were married or divorced, we allow some flexibility outside of these cohort age groups.

The baseline survey will only be conducted among households with at least 1 eligible core respondent. We will only ever sample one CR per household for the GAGE study.

2.4 Household Selection

The GAGE Quantitative team will select core respondents at random from among all households with at least one core respondent that fits our eligibility criteria based on provided lists from UNICEF and UNHCR. The field staff will be given a form which lists the selected GAGE households. This is the **sample sheet**.

2.5 Household Interviews

The procedure will occur as follows; the Mindset office team will call the potential interviewees in the sample lists provided to set up interviews. Potential interviewees will be called up to five times if the callers are unavailable when reached out to initially (those that refuse the interview will not be called again). A set of replacement households will also be listed on the **Sampling Sheet**. In Jordan it is expected that the replacement sheet will be used largely due to incorrect age information and incorrect contact information. These households will be replaced using the sampling sheet from the same age cohort (young/old), gender (male/female), and location (camp). The replacements on each list are ordered, and replacements will be drawn starting at the top of the list while working our way down the list in order. If a replacement household also needs to be replaced, this will be documented just as we would an original household that needs to be replaced. Mindset will document all replacements used, along with the household they are replacing and the reason for the replacement, on the excel sheet entitled "GAGE Jordan Baseline Replacement Log".

Mindset will prepare the logistical plan for those who accepted to participate in the study. Interviews will be conducted in different areas across Jordan; therefore, these locations will be clustered based on proximity, so that each area can be given to a different field team. In the field, each interviewee is targeted up to three times, if initially unavailable. If the interviewer is unable to interview any of the selected households, the interviewer must contact his/her supervisor as soon as possible. The supervisor will investigate the problem as quickly as possible and, if necessary, instruct the interviewer on a replacement household to be interviewed. If the household must be replaced, the supervisor will explain why the originally selected household was replaced in the daily submitted **Achievement Form**, where he/she also logs the details of the successful interviews.¹ The five main reasons for replacement are: (i) refusal, (ii) moved away and won't be back in the near future, (iii) ineligible based on updated age information, (iv) unable to participate due to some sort of disability, and (v) unable to contact.

Locating the households and beginning the interviews should not be delayed. Prudently, the field team should plan their interview schedule within a community. Likely the interviewer will have to make two or three separate visits over different days to each GAGE household in order to complete all survey instruments.

3. Introduction to the Administration of the Household Survey

This section will outline general guidelines for conduct of the household survey, including working with human subjects, how to approach and engage households, and general rules on filling out the household survey questionnaires.

3.1 Human Subjects

Please also refer to the following presentation for additional information:

3 GAGE Jordan Baseline Training Human Subjects.pdf

8 GAGE Jordan Baseline Training Additional Policies.pdf

Ethics and Rules of Conduct of Interviews

As researchers, the most important priority is to ensure the safety and security of the research participant, by minimizing any associated risks and loss of privacy. There are three basic principles of ethical research that should guide all interactions with every study participant. Those three principles are respect, minimal harm, and fairness.

All enumerators will sign an agreement against research misconduct, including fabrication or falsification in proposing, collecting, or reporting interview findings. All fieldwork staff must sign and abide by this pledge (in Arabic).

Enumerators will also sign an agreement against conflict of interest, i.e., enumerators will pledge not to conduct an interview with a respondent whom they know.

¹ It is possible that we will survey 100% of the eligible respondents, in which case there will not be any replacement households interviewed. Interviewers must make every effort to interview all original households before determining that a replacement household should be contacted.

Showing Respect

The data collector is the “ambassador” for the GAGE study. People (including the research participants and community members) will judge the study based on interactions with the field team and other researchers. It is important to remember that all of your actions should be guided by respect for individuals and communities. Data collectors should always show respect for individual study participants, by remembering that each respondent is unique and has a right to share their honest opinion and personal experience without fear of judgment from the research team. All enumerators will be trained on a non-discriminatory code of conduct. This will focus on removing prejudice and promoting objectivity when dealing with research subjects.

It is also important to respect the host community and local leaders, both by behaving in a friendly and considerate manner, and by respecting the customs and cultural norms of the area. It is important to be polite with community members, many of whom will be curious about your presence in their area, and to explain the research project if they inquire on it.

Local customs and norms should be respected and followed at all times. This includes considerations for proper dress and hair covering, personal hygiene, and appropriate activities (for instance, in some communities, it may be inappropriate to partake in chat or alcohol consumption, or to eat certain food at certain times). Data collectors and other researchers should always respect religious and cultural beliefs that may be different from their own, in particular by avoiding overt displays of religiosity. When invited into the homes of others, always behave in a courteous manner.

Moreover, the data collectors should respect the respondents' freedom of choice; prior to commencing the interviews, the enumerator will explain the purpose and the expected length of the interview and will explain that the respondent is free not to partake in the interview, may choose not to answer any question they do not wish to answer and may stop the interview at any point.

How to Approach and Interact with Respondents

When approaching households selected for participation in the GAGE survey, it is important to carefully explain the research project as written in the Consent Forms. Field staff and other researchers should never make any promises about benefits or support. Field staff and other researchers should always follow provided scripts and refer to the phone number on the consent forms if there are additional questions. They should not answer questions that are not explicitly addressed in this material.

Field staff should always be courteous and tactful in dealings with households and respondents. Above all, field staff attitudes towards the respondents in the survey households must be one of respect. Field staff must always be patient towards survey respondents and other household members. Be business-like in conduct – never bullying, demanding, or rude.

Sometimes bullying, being demanding and being rude is not intentional. It is important to think about ways that an interviewer may unintentionally show these characteristics. For example, if a respondent feels uncomfortable answering a question, they should never be pressured to answer it. It is important to collect as much quality data as possible. However, we should do this without making the respondent feel **too** uncomfortable. It is important to consider the respondent's body language (nonverbal communication like turning their back to the interviewer or suddenly getting

really quiet). Body language can help the interviewer understand when to move on to the next question, even if the respondent has not answered.

Always act in a way that warrants respect and cooperation from the respondent. During interviews, field staff should work efficiently and relatively quickly, but should not rush the respondents or make mistakes. After each interview, data collectors should thank each interviewee for their time. This is vital if the survey is to be carried out successfully. Field staff will find work more pleasant if the interviewer remains polite and friendly to everyone at all times. Field staff should be willing to answer any questions the respondents raise about the survey and its contents. In most cases, the information contained in the **Consent Form** will provide a sufficient response.

The survey interview may be long, especially for adolescent Core Respondents. This will be trying on respondents' patience and that of the survey interviewers. Nevertheless, the rules of courtesy and politeness must still apply. If necessary, interviewers may break the interviews of household members into shorter interviews. However, the interviews with all household members should be completed within a span of two or three days at most.

At the start of the interview, the interviewer should always determine if the Adult Female has any appointments in the next hour or two, and be considerate of meal times. If sufficient time is available to complete several sections of the Adult female questionnaire prior to the appointment or other commitment, proceed and complete as much of the interview as possible. When the respondent must leave, arrange for another meeting in the next day or two for completion of the remainder of the interview.

Interviewers should seek to develop a smooth-flowing interviewing style so that the interviewer can obtain all of the information required from an individual in the shortest possible time. The interviewer does not want to unnecessarily test the respondent's patience by delaying the interview in any way, particularly through excessive probing on questions that the respondent feels that they have already answered to the best of their ability and recollection. The interviewer's interview technique for completing the questionnaire will improve dramatically as the interviewer gains experience. The guidelines in this manual should be consulted in this regard.

Field staff need to attempt a compromise between:

- maintaining a smooth-flowing, continuous dialogue that allows the interviewer to obtain all of the information required in the shortest possible time – that is, without testing the patience of the respondents by delaying the interview in any way – and,
- allowing the respondents to ask any questions that they have about the survey so that they are convinced of its value and are cooperative. Doing so, however, will take time and will reduce the efficiency with which the interviews are completed.

In conducting an interview, if it is clear that the respondent has understood the question they have been asked, the interviewer must accept whatever response the respondent provides. Probing questions can be used to make sure the respondent understands the key elements of the question being asked. However, the interviewer must never second-guess the respondent or make the assumption that the interviewer has a better understanding of the condition of the individual or household than the respondent does. The function of the interviewer is not to verify that the information provided is correct. The analysts of the GAGE survey data are interested in what the

respondent actually says. It is always possible that the respondent will lie or provide inaccurate information, but the interviewer should not make any judgements on the information provided.

There are exceptions, of course. At all stages of the interview with members of a survey household, field staff should be alert to errors. These can be accidental or deliberate. The interviewer can never force people to give answers that they do not want to give, but the interviewer can approach the true facts by diplomatic and intelligent interviewing. For example, if the respondent says that the household has no radio but the interviewer sees a radio on the table inside the dwelling, the interviewer should inquire about it. However, the interviewer should not probe excessively after seeking initial clarification from the respondent. In any case, the interviewer should never go outside of the household (to community leaders or neighbors) to get information. This is beyond the scope of the interviewer's work.

Ultimately, assessing whether the answers provided are 'wrong' or 'right' should not apply to the interviewer in administering the household questionnaire. The questionnaire is being administered to the survey household members because we rightly expect that they will be able to provide the best information about their own living conditions.

Treating respondents with condescension and a lack of respect or re-interpreting the answers provided by the respondents will not be tolerated. All field staff must treat all respondents equally irrespective of their ethnic group, political influence, and social and economic status.

How to Approach and Interact with Children and Adolescents

It is important to build a rapport with children and adolescents prior to attempting gaining their assent and interviewing them. Be friendly, with a positive mood and facial expression, and allow them some time to warm to you by talking to them about topics of interest to them, such as what they did yesterday, school, or their favorite activities.

When beginning an interview with a child or adolescent, try to establish a location for the interview that is in plain sight of others, so that their parents, caregivers, and others concerned about their wellbeing are reassured that you intend and are doing them no harm. However, keep in mind that some of the questions you will be asking are quite personal and may be difficult for a child to answer freely in front of others. For this reason, it is important to conduct the interview beyond the hearing of others if possible. You may need to seek permission of an adult to obtain this kind of privacy.

Remember that children are often very busy and aside from schooling and homework are likely to have many responsibilities around the home, in the fields and other places of work. You must find out when it suits them best to talk to you and make sure to allow them to resume tasks when they need to. Children who care for younger siblings may need to continue fulfilling this responsibility whilst being interviewed.

Because children are not generally used to talking at length to adults or to having someone listen to them while they talk about their problems, hopes, and lives, you may find that they become quite emotional and they may even cry. This is quite common and does not necessarily mean that you have upset them. It is very important to acknowledge their feelings, to give them reassurance and comfort, a chance to recover and, if necessary, to end the interview. If during the course of the interview they divulge something to you that is causing them distress, you should report this to your supervisor afterwards so that s/he can take appropriate action.

Most communities have very clear ideas about the appropriate manner for treating children and how children themselves should behave. Ideas about what is appropriate for boys and girls will most likely be very different, especially once they are 12 years old. Therefore, you should avoid any offense, and it is very important to be aware of and follow local customs that determine the different ways in which adults treat boys and girls, as well as the manner in which young people are expected to behave towards adults.

It is essential that you show respect, patience and sympathy at all times, and that you allow children and adolescents sufficient time to answer your questions. You can be encouraging and supportive but should avoid providing them with answers when they do not respond immediately to your questions or find it hard to express themselves clearly. It is important that you are able to understand their answers and code them accurately without influencing them or mixing your own judgement about what they should be answering. This would seriously affect the results of the study. If a child becomes distressed, you should act as naturally as possible, offering comfort as appropriate and ceasing the interview if you feel it to be necessary. Full details on child protection and documentation to keep if there should be an incident during the interview is discussed later in this section.

Minimizing Harm

The research team, including the data collector, is responsible for the physical, mental, and social well-being of the research participant. Although this study has been carefully designed to minimize physical, mental or social harm, study participants may still experience some small amount of it. For example, participants may feel some discomfort while answering sensitive questions, about their education, diseases or health status, opinions about their body, psychosocial wellbeing, sexual and/or violent encounters and financial status.

Being Fair

Fairness requires that the benefits and burdens of research are equally shared in the community. This means that no individual or population is exposed to risks of harm while other individuals or populations receive the benefits. Researchers can practice fairness during recruitment, by making sure that all appropriate participants are included in the study. It would not be ethical to only recruit the most educated or healthier members of the community, even if community leaders suggest it. For more information, please see Section 2 for information on sampling.

Researchers should also consider special care for vulnerable participants. Vulnerable participants could include people with disabilities or children.

Privacy and Confidentiality

All study participants have a right to privacy and all members of the research team have a role to play in ensuring it. Invasion of privacy can occur if personal information is accessed or collected without the subjects' knowledge or consent. Invasion of privacy also can occur if a subject's participation in a study is revealed despite assurances that this would not happen.

Therefore, all team members will sign a non-disclosure agreement which states that all data related to the data collection effort, including personal data of respondents, their responses and the

findings of the data collection is considered confidential and cannot be disclosed with any third party.

One of the primary ways to cause harm to a study participant is intentionally or accidentally sharing any information (even if you do not think it is private) that is learned by researchers. Confidentiality can be compromised through an unauthorized release of study information, which could have a negative impact on the subjects' psychological, social, or economic status. For example:

- Accidentally sharing the health status of a study participant could result in the subject's loss of employment or embarrassment.
- Accidentally sharing data collected about sexual activities or partners could result in being punished by the study participant's family or community.

Researchers, especially data collectors, can also respect the personal privacy of study participants by not causing any unnecessary embarrassment or discomfort. It is important to note that cultural differences or customs that may infringe on privacy should be anticipated and minimized.

As an interviewer, it is your responsibility to maintain confidentiality of any information that you learn or observe during an interview. Never disclose any fact about anyone you interviewed to someone else, including to other members of the research team. The information will be used for research purposes only. Respondents should be told that the information they provide will be used in statistical form only and that identities (through names, GPS, or other forms) will not be associated with their responses when data is analyzed.

If it becomes necessary to discuss an event that occurred during an interview, or anything about an interview, with another member of the GAGE team, it is important to always ensure the discussion is conducted in private. For instance, it would not be appropriate to have this discussion in a public space (such as on a bus or in a restaurant), or over the phone while you are in a public location.

To assure confidentiality, no person except the GAGE supervisors or people from the GAGE/In Country management team should come with the interviewer when they conduct an interview.

This means that if an adult female is being interviewed, any of her children that are able to understand the questions and responses should not be present. The male of the home also should not be present. If a core respondent is being interviewed, the parents, siblings and other community members should not be present. If ANYONE enters the interview space while it is in session, the interview must be stopped immediately; and only restarted once you are alone with the respondent. It is important for supervisors and interviewers to discuss ways to ensure privacy at all times.

If a GAGE team member does accompany the interviewer to an interview, the interviewer should always be sure to introduce the staff member to the respondent, making clear to the respondent the purpose of the presence of the GAGE staff member. In most cases, the GAGE staff will be present to monitor the quality of the interviewer's work and to support and assist the interviewer in effectively carrying out the interviewer's assigned tasks. The supervisors are instructed to not interfere with the interviewer's administration of the questionnaire to the survey respondents, but will discuss any issues related to the interviewer's administration of the questionnaire later with the interviewer in private.

Child Protection

The Core Respondents of the GAGE baseline survey are individuals aged 10 to 12 years old or 15-17 years old. There are special protections in place for research that involves children. Children are persons who have not attained the legal age for consent to treatments or procedures involved in the research, under the applicable law of the jurisdiction in which the research will be conducted. Note that if the CR is living independently, he/she can consent for herself.

Since children, by definition, cannot give consent, the process of gaining consent from a child involves getting the child's *assent* and their guardian's *consent*. This process is detailed in section 3.2. Assent means a child's affirmative agreement to participate in the research, and permission means the agreement of the parents or guardian to the participation of their child or ward in research. It is the responsibility of the interviewer to ensure that *both* steps are taken to obtain consent for the participation of children in the research.

Please refer Appendix 1 of this document for the **GAGE Child Protection Policy** for more detail. **This policy MUST be reviewed as part of all training.**

Problem Cases

As a general point, if the interviewer encounters a different or unusual case in a particular section or sections for a survey household and are not sure what to do, record all of the details of the problem in the notebook you are provided. For these problem issues, after you leave the problem household, check this manual for guidance. If the solution cannot be found in this manual, the interviewer should consult their supervisor at the earliest opportunity.

If there is an incident with the core respondent, refer to the Child Protection Policy presented above.

Referrals

If the interviewer encounters a case where a child or an adult discloses experiences of gender- or age-based violence or displays possible need for mental health and psychosocial support services on account of trauma, please follow the protocol below. The field referral form can be found in Appendix 2 of this document. Cases subject to referral should cover the following vulnerabilities: Physical violence, Sexual violence or exploitation, Impending child marriage, Worst forms of Child Labour, Unaccompanied and Separated Children, Children in conflict with the law, Children associated with armed forces and armed groups, Severe violence in schools and domestic violence.

At the end of each interview, we will also provide children and their caregivers with a card with UNHCR and UNICEF helpline numbers so that they can report any concerns after the interview. This step is included as in some cases emotional responses happen after not during an interview. The interviewers should also carry a list with numbers for local service providers that can be shared if asked by respondents.

Referral Protocol:

1. Orally report any disclosure of violence or abuse to the supervisor of your team. This should happen without delay immediately after the interview.
2. Complete the Referral form on the tablet.
3. Supervisors inform Project Coordinator at Mindset about each potential referral case.

4. Mindset will keep an updated online log with referral cases and notify via email (marked urgent) GAGE Jordan Coordinator
5. If the GAGE Jordan Coordinator does not respond within 24 hours, please contact the GAGE Project Director.
6. Each case subject to referral should be discussed internally with GAGE before taking further action, with exception of cases when you find respondents are at **SERIOUS** and **IMMEDIATE** risk. In these cases, contact UNICEF Child Protection Officer at [number redacted] to seek guidance for specific cases.

Referral pathway:

If person resides in a refugee camp:

1. If the person consents to their information being shared with UNHCR:
 - For Child protection referrals: send the referral form and a separate consent form to the IMC Senior Child Protection Officer. Copy in the email UNHCR Protection Associate (CP/SGBV) and UNHCR Associate Protection Officer.
 - For SGBV-related referrals: send the referral form and a separate consent form to UNHCR Protection Associate (CP/SGBV) and copy UNHCR Associate Protection Officer.

No further action/inquiry should be undertaken by GAGE researchers after this point.

2. For cases that we decide to be referred without consent:
 - Contact UNICEF Child Protection Officer to seek guidance for specific cases when you find respondents are at risk but they do not give consent.

If person resides outside a refugee camp

- Cases should be referred to UNICEF Child Protection Officer, at [number redacted] regardless of consent.

3.2 Introductory Scripts and Consent

Data collectors must ensure that data ONLY comes from individuals who understand what their participation entails. It is never appropriate to interview someone who does not have a full understanding of the purpose of the research and their role in the research. They should understand the risks and benefits of participating in the study, as well as their right NOT to participate.

All participation, from every research subject is voluntary, so no one is required to take part in the study. Every person that is approached has the right to refuse to be part of the study. Even if they agree to participate in the study, they can refuse to answer certain questions or sections. In order to educate participants about their rights as a potential research subject, the informed consent process must happen at the start of every interview. The informed consent process includes reading a document to participants that summarizes the goals and timeline of the research, the risks and benefits and their right to participate or decline. Once the research subject has reviewed the informed consent document and has had the opportunity to ask questions about the study, they can decide if they would like to participate. For CR interviews, it also includes gaining consent from the child's parent or guardian as well as the child's assent. It is the data collector's responsibility to make

sure that participants understand the consent procedure and truly agree to participate in the study, with minimal influence from anyone else (including parents, community members, or you).

It is the responsibility of the supervisors to ensure that all interactions with respondents is done, only after they have provided their consent. Supervisors should ask daily about the informed consent procedures and ensure that the interviewers are compliant. This is of critical importance.

The following outlines the procedures for the interviewer to introduce him or herself upon arrival to the household for the first time, to identify the respondents, and to obtain consent. Additional information on the consent process is also included in the instructions for the coversheets of each of the Household Surveys in the following sections:

- 5.1 Coversheet for Household Questionnaire,
- 6.1 Adult Female (AF) Survey Coversheet
- 7.1 Core Respondent Coversheet

Please see the following training PowerPoint for additional information:

4 GAGE Jordan Baseline Training Consent and Assent.pdf

Introduction to a Selected Household and Obtaining Core Respondent Consent/Assent:

Since this research study focuses on understanding the needs of and services for adolescents (CR), we are primarily focused on interviewing the adolescent (CR) in the household. As a result, the adolescent's consent/assent **MUST** be gained for inclusion of the household in the study. We will **NOT** attempt to interview anyone in the household if the CR consent/assent is not obtained. There will be no further communication with this household, if the CR consent/assent is not obtained. Once the CR has agreed to participate in the study, you should first try to speak to the AF.

In order to gain consent/assent for the CR in the household there are two cases:

1. **The CR is living with a parent/guardian.** Because all targeted Core Respondents are under the age of 18, this will be the most common case. This will almost always be the case for the Young Cohort CRs. This will also be the case for the majority of the Old Cohort CRs. For the CR who is a dependent, there are two steps to gaining consent/assent:
 - (1) Obtain parent/guardian consent
 - (2) Obtain Adolescent Assent
2. **The CR is living alone/married.** In some cases, an Adolescent may be living independently or be married and living with a spouse. In these cases, although the CR is under 18, the CR may give consent for him or herself because the CR is living independently. Before allowing the CR who is a minor to give consent for him or herself, first seek out consent for the CR from the following:
 - (1) Try to obtain parent/guardian consent
 - (2) If CR is married, then try to obtain spousal consent if CR is a minor and spouse is an adult
If parent/guardian is unreachable OR if both CR and his/her spouse are minors
 - (3) Obtain Adolescent consent

Determining whether CR lives with a Parent/Guardian

Upon arrival at the household, locate an adult household member to speak to, preferably an elder in the household, the household head, or the wife of the household head. The selected adult in the household should not be spouse of the Core Respondent.

Sometimes, you may arrive at a household and there are no adults physically available to speak to you. This may happen when adults are away for work, for example. It may also happen when an adolescent lives alone/is married.

If you learn that no adult is available who is not the spouse of the CR, probe for more information to understand whether an adult is simply not available at the moment or if there is never a non-spouse adult at this household. If there is an adult in the household, but this person is not currently available, then it may be necessary to revisit this household later. See **Section 5. Household Questionnaire** for additional instruction.

1. If there is an adult in the household, follow instructions for **Obtaining Consent/Assent for Adolescents Living with a Parent/Guardian**
2. If there is never an adult in the household OR the CR is married and living with a spouse (without a parent/guardian present), proceed to the instructions for **Obtaining Consent/Assent for Adolescents Living Alone/Married**.

Obtaining Consent/Assent for Adolescents Living with a Parent/Guardian:

1. **Introduce yourself and your purpose:** Read the appropriate introductory script provided. (SB 1.1 Introduction – For households where the adolescent is living with a parent/guardian)
 - a. **Address any questions or concerns, and wait for introduction to parent/guardian of the CR.** It is preferable to be introduced to the female parent or guardian for the CR, since we will also seek her participation in the study, but discuss with the male parent or guardian, if necessary.
2. **Obtain Parent/Guardian Consent:** Upon introduction to the parent/guardian read the Parent/Guardian Consent script, skipping the introduction if you have already been speaking with a parent/guardian.
 - a. **If consent is NOT obtained from the parent/guardian:** end interview and note reasons on the tracking sheet. We will not attempt to interview anyone in the household if parent/guardian consent is not obtained. There will be no further communication with this household. Inform your supervisor.
 - b. **If consent is obtained:** continue and ask to be introduced to the CR.
3. **Obtain Adolescent Assent:** Upon introduction to CR, read CR assent
 - a. **If assent is NOT obtained:** end interview and note reasons on tracking sheet. We will not attempt to interview anyone in the household if CR assent is not obtained. There will be no further communication with this household. Inform your supervisor.
 - b. **If assent is obtained:** continue.

Obtaining Consent for Adolescents Living Alone

1. **Introduce yourself and your purpose.** Read the appropriate introductory script provided.

- a. Address any questions or concerns. Seek guidance from supervisor, if the questions or concerns cannot be addressed.
 - b. If the respondent says that they will speak to you, continue to the next step. If the respondent says no, end the survey and note the refusal on the tracking sheet.
2. **Try to Obtain Parent/Guardian Consent:** Upon introduction to the parent/guardian read the Parent/Guardian Consent script, skipping the introduction if you have already been speaking with a parent/guardian.
 - a. **If parent/guardian is found but consent is NOT obtained:** End interview and note in the tracking sheet. We will not attempt to interview anyone in the household if CR consent is not obtained. There will be no further communication with this household. Inform your supervisor.
 - b. **If consent is obtained:** continue with the survey questions, in a private location.
3. **If parent/guardian is unreachable, Obtain Adolescent Consent:** Read Consent. After reading the consent, read Q1 and record the response.
 - a. **If consent is not obtained:** End interview and note in the tracking sheet. We will not attempt to interview anyone in the household if CR consent is not obtained. There will be no further communication with this household. Inform your supervisor.
 - b. **If consent is obtained:** continue with the survey questions, in a private location.

Obtaining Consent for Adolescents that are Married

1. **Introduce yourself and your purpose.** Read the appropriate introductory script provided.
 - a. Address any questions or concerns. Seek guidance from supervisor, if the questions or concerns cannot be addressed.
 - b. If the respondent says that they will speak to you, continue to the next step. If the respondent says no, end the survey and note the refusal on the tracking sheet.
2. **Try to first Obtain Parent/Guardian Consent:** Upon introduction to the parent/guardian read the Parent/Guardian Consent script, skipping the introduction if you have already been speaking with a parent/guardian.
 - a. **If consent is NOT obtained from the parent/guardian:** end interview and note reasons on the tracking sheet. We will not attempt to interview anyone in the household if parent/guardian consent is not obtained. There will be no further communication with this household. Inform your supervisor.
 - b. **If consent is obtained:** continue and ask to be introduced to the CR.
3. **If parent/guardian is unreachable AND the CR's spouse is an Adult (18 or older), Obtain Spousal Consent:** Upon introduction to the Adult spouse, read the Parent/Guardian Consent script, skipping the introduction if you have already been speaking with the spouse.
 - a. **If consent is NOT obtained from the Adult Spouse:** end interview and note reasons on the tracking sheet. We will not attempt to interview anyone in the household if Spousal consent is not obtained. There will be no further communication with this household. Inform your supervisor.
 - b. **If consent is obtained:** continue and ask to be introduced to the CR.

4. **If parent/guardian is unreachable AND the CR and his/her spouse are both minors (younger than 18), Obtain Adolescent Consent:** Read Consent. After reading the consent, read Q1 and record the response.
- If consent is not obtained:** End interview and note in the tracking sheet. We will not attempt to interview anyone in the household if CR consent is not obtained. There will be no further communication with this household. Inform your supervisor.
 - If consent is obtained:** continue with the survey questions, in a private location.

Obtaining Consent for Adult Female Survey Respondents

In all households, an Adult Female Survey will be administered. Depending on whether the selected CR is in the Old Cohort or the Young Cohort, the procedures for identifying the respondent to the AF will vary. This section will outline the procedure to identify and obtain consent from the AF survey respondent, according to CR cohort and household structure type. Note that even if an AF is not located in the household or is unwilling to participate in the survey, the CR will still be interviewed, so long as the proper consent/assent is obtained.

Consent from the AF survey respondents will be obtained immediately after obtaining consent/assent for the CR participation in the study.

If the CR is living with a parent/guardian, locate the parent/guardian again, and read the following script.

“We would like to speak with both **[CR name]** and an adult female in the household. For the adult female, we would prefer to speak to the adult woman who lives in this household and who has the most say in decisions related to **[CR name]**. This may be **[CR name]**’s mother, or it may be someone else. Could you please direct me to this person?”

If the CR is married and not living with a parent/guardian, continue speaking with the CR, and read the following script.

“We would like to speak with both you and an adult female in the household. For the adult female, we would prefer to speak to the adult woman who lives in this household and who has the most say in decisions related to you. This may be yourself, or it may be someone else. Could you please direct me to this person?”

If the CR is in the Old Cohort living alone, the CR will be the respondent to the AF Survey.

Locate relevant adult household members to be surveyed, in the following order:

1. **AF: Read adult female consent** After reading the consent, read Q1 and record the response.

Identifying and Obtaining Consent from the AF Survey Respondent

The key criteria for identifying the most-preferred AF Survey Respondent are:

1. Adult Female
2. (Most heavily) involved in decision-making or caregiving of the CR
3. Lives in household;

For this individual to be the most-preferred respondent all three criteria must be met.

In the case that this individual does not exist in the household, or this individual refuses to participate in the study, use the following priorities to identify the respondent, according to whether the CR is in the Young Cohort or the Old Cohort.

Young Cohort:

1. Adult Female in the household involved in decision-making, caregiving for the CR
2. Adult Female in the household

If all options for adult females in the household have been exhausted:

3. Adult Male in the household involved in decision-making, caregiving for the CR
4. Adult Male in the household

If all options for adult males in the household have been exhausted, there will be no Adult Female Survey for this household.

Old Cohort:

1. Adult Female in the household involved in decision-making, caregiving for the CR
2. Adult Female in the household

If all options for adult females in the household have been exhausted:

3. Adult Male in the household involved in decision-making, caregiving for the CR
4. Adult Male in the household

If all options for adult males in the household have been exhausted:

5. The CR can be the respondent for the AF Survey Module.

Household Interview

Once consent is obtained for the CR and the AF, begin the household interview. Conduct the surveys in the following order:

1. AF Survey
 - a. If AF has consented, start by interviewing her.
2. CR Survey

The following subsections will discuss how to identify the AF, according to priority and CR type.

3.3 Identification Codes

In order to keep track of respondents and then re-interview them in the future, each community, household, adult female, adult male, and core respondent is assigned an identification code. Each country has its own identification codes according to geographic divisions.

The field staff will be informed of the household ID code (along with other relevant identifying information) when they are assigned the selected households to interview. The core respondent, adult female and adult male ID codes are determined after the household roster is completed since it relies on the household roster number of the eligible respondent.

ID codes are critically important. They are the only way we can link individuals across parts of the questionnaire. Moreover, since GAGE is a longitudinal survey, we need to ensure that IDs are consistent and correct for each concurrent round of the survey.

The following sections outline the ID code structure for Jordan.

Jordan

The structure of the Household IDs for households in the main quantitative sample—and purposely selected respondent households who are also found in the quantitative sampling lists—is as follows:

- Sample type: The first digit will indicate which sample the household comes from, and is also a general location identifier.
 - 1=Camp Makani, 2=ITS Makani, and 3=Host Community Makani, 4=Camp Non-Makani, 5=ITS Non-Makani, 6=Host Community Non-Makani, 7=Host Community Non-Makani.
- Governorate: Digits 2 and 3 will indicate the Governorate (or camp) where the household lives. (In some cases, where the sample was chosen from the Makani participants lists, Governorate and District are specific to the Makani and not the household location.)
 - The official Governorates in Jordan where households were surveyed are coded as follows:
 - Amman (02)
 - Irbid (05)
 - Jerash (06), including Jerash/Gaza Camp
 - Mafrq (10)
 - There are also unique codes for Azraq (13) and Zaatari (14) Refugee camps.
- District: Digits 4 and 5 will indicate the District within the Sample type and Governorate.
 - The 51 official Districts within the 12 Governorates are coded plus there is a unique code for each “Village” in Azraq camp and “District” in Zaatari camp.
- CR group: Digit 6 will indicate the specific CR group for which the household was sampled.
 - 1=Young Male, 2=Young Female, 3=Old Male, 4=Old Female, 5=Young Disability, 6=Old Disability
- Household number: Digits 7-9 will indicate the unique household number assigned to household.

The structure of the Household IDs for purposely sampled households that were *not* also in quantitative sampling lists is as follows:

- These Household IDs begin with the numbers “800000” or “900000”, followed by a three-digit household number, beginning with 001.
- Note that purposely sampled households can be located in any of the 4 governorates in the Main Quantitative sample above (Amman, Irbid, Jerash, and Mafrq) or Zarqa, or in any of the refugee camps included in the sample (Azraq, Zaatari, or Jerash/Gaza Camp).
- Note that respondents living in Jerash/Gaza Camp identified through snowball sampling also have Household IDs beginning with the numbers “800000” or “900000.”

3.4 General Instructions for Completing the Questionnaire

Please see the following training PowerPoint for additional information:

5 GAGE Jordan Baseline Training Asking Questions.pdf

Reading questions

Broadly speaking, the GAGE household survey consists of questions and answers to questions. All of the questions have been designed to elicit specific information, so it is important to read the questions exactly as they are written in the questionnaire, following the established order. Closely follow all instructions on the questionnaire when asking the questions to ensure that each question is understood and answered correctly.

The questions in the survey have been designed to accommodate all possible answers you would need for the particular question. The following sub-sections will describe the types of questions and notes that will be found in the survey.

Unprompted vs. prompted questions

There are some questions for which the interviewer may read out the responses and other questions for which the interviewers should not read the responses out loud. In the SurveyCTO program, there will be notes associated with questions that specify whether responses should be read out loud or not.

Here is an example of a question for which responses should not be read aloud. This is an **unprompted question**:

Figure 3.1 - Unprompted Question

What are the the first main characteristics of this person that you admire most?

Do not read list aloud.

- ☒ Nice looking
- ☐ Brave/Strong
- ☐ Positive personality (eg, cheerful, happy, friendly)
- ☐ Respectful of others
- ☐ Loyal
- ☐ Honest
- ☐ Caring / kind
- ☐ Smart / intelligent / well-educated
- ☐ Religious / devout
- ☐ Politically active
- ☐ Contributes to community
- ☐ Challenges norms

Next >

Note that the text says, “Do not read list aloud.”

Here is an example of a question for which responses should be read aloud. This is a **prompted question**:

Figure 3.2 - Prompted Question

Now I am going to read you a statement that some children have made about their food situation. I feel hungry, because there is not enough food to eat. In the last four weeks, this has happened

Read response options aloud unless otherwise noted.

- ☐ Many times
- ☒ 1 or 2 times
- ☐ Never
- ☐ Do not read aloud: Refused
- ☐ Do not read aloud: Don't know

Next >

The italicized text indicates that responses should be read aloud unless otherwise noted.

Figure 3.3 - Specific Response Options not read aloud

How much do you worry or feel sad?

Read response options aloud unless otherwise noted.

- ☐ Not at all
- ☐ A little
- ☐ A lot
- ☐ Somewhere in between a little and a lot
- ☐ *Do not read aloud:* Refused
- ☐ *Do not read aloud:* Don't know

For this question, all options should be read aloud, as indicated in the initial instructions, except the final two options which read “Do not read aloud: Refused” and “Do not read aloud: Don’t know” in italics, additionally indicating that it should not be read aloud.

Closed Questions

Closed questions are questions that have the answer options supplied to them. The answer options accommodate all possible answers by respondents. Figure 3.4 presents an example of a closed question in the survey.

Figure 3.4 Closed Question

1a. Does the household have a title or deed for the house or the land the house is on?	Yes	1
	No	2
	Refused	-97
	Don't know	-99

Open Questions

An open-ended question requires a response given by the respondent. These are typically questions for which each respondent has a different response, such as a phone number or an address. For these questions, the survey form will provide dialogue box into which you will type the response (See Figure 3.5).

In SurveyCTO, when you enter text into a dialogue box, **it is very important to swipe to the right when you have completed entering your response.** SurveyCTO will recognize that you have entered text into the dialogue box and will allow you to move on to the next question.

Figure 3.5 Open Question

What is [Contact 2 name]'s postal address?
(Refused = -97; DK = -99)

Combination Open/Closed Questions

Combination of closed- and open- questions are those that have a set of options from which you can choose, including an option that reads "Other, specify." In this case, we have worked to provide an exhaustive list of the options that are relevant for all respondents, but there may be some respondents for whom these response options do not work. In that case, combination questions provide you with the opportunity to enter responses for which there is no option into a dialogue box. It is important that you are carefully to ensure that the response given by the respondent does not fit into any of the provided responses before entering in a custom response under "Other." See Figure 3.6 for an example of this question type.

Figure 3.6. Combination Open/Closed Questions

Who have you told?

- ☐ Parent
- ☐ Other adult family member
- ☐ Sibling/ other child family member
- ☐ Friend
- ☐ Other school official
- ☐ Religious leader
- ☐ Police or local security
- ☒ Other
- ☐ Refused
- ☐ Don't know

Next >

If you select “Other (specify)” and enter text into the dialogue box, **remember to swipe to the right when you have completed entering text.**

If “Other” is selected, specify what the “Other” response is. In SurveyCTO, selecting “Other” will provide a space to specify the “Other” response. Please specify what the “Other” response is. **Do not leave this blank.**

Single vs. Multiple responses

In addition to the question types described in the previous sections, there are also different rules about how many responses can be entered for each question. There are some questions for which there can only be a single answer. This occurs when the possible responses are mutually exclusive (Figure 3.7).

In other cases, there could be more than one answer to some questions. For these questions, there are specific instructions explaining how many responses can be selected. For some questions of this type, we will ask the respondent to select the two most important responses, and in others you will select all responses that apply. It is important to read the instructions carefully to know the rules for any particular question; however, the survey programming will not allow you to select more responses than is allowed by the question. If more than one response is allowed for the question, the response items will appear with check boxes next to them (see Figure 3.7)

Figure 3.7 Single vs. Multiple Responses

Example of Single Answer, Mutually Exclusive Response:

Who have you told?

- ☐ Parent
- ☐ Other adult family member
- ☐ Sibling/ other child family member
- ☐ Friend
- ☐ Other school official
- ☐ Religious leader
- ☐ Police or local security
- ☒ Other
- ☐ Refused
- ☐ Don't know

Next >

Example of Multiple Response Options:

Q.9 Who did you talk to?
Tick all that apply

- ☒ Parent (1)
- ☐ Other adult family member (2)
- ☒ Child family member (3)
- ☐ Friend (4)
- ☐ Teacher or other school official (5)
- ☐ Religious official (6)
- ☐ Other (specify) (-96)
- ☐ Refused (-97)

Questions or notes not meant to be read aloud

In the survey form, there will be notes specifically to the interviewer that are not meant to be read aloud. Please read and consider these notes carefully. Questions and notes that are not meant to be read aloud will be in italics in the electronic survey. Please read these instructions carefully.

Here is an example of how the italicized text will be incorporated into the survey to indicate information that should not be read aloud:

Figure 3.8 - Text not meant to be read

Enumerator Check: Are there any children under the age of 5 in the household?

☒ Yes

☐ No

Next >

In the case that a paper survey is being utilized, notes that should not be read will be bolded and/or italicized and may be preceded with “Note” or “Do not read” or placed in brackets. Text that should be read will be preceded with “Read:” in bold. In the below example, you would read “Now I will read a list of statements... as we just did” aloud, as it is preceded by “**Read:**”. You would not read “Remind respondent the location.... Record the appropriate code” because it is bolded and italicized. Likewise, you would not read the phrases in brackets.

Figure 3.9 -Text not meant to be read, Paper Survey Example

Read: Now I will read a list of statements that may or may not apply to you. Please show me whether you agree or disagree that these statements describe you by moving to the designated spaces, as we just did.

Remind respondent the location for “Agree” and “Disagree”. Remember to prompt whether the respondent agrees(disagrees) or strongly agrees(disagrees) when the respondent goes to the corresponding space. Record the appropriate code.

[IF MOVES TO Agree]: Now I would like to do know: do you just agree that [READ STATEMENT] or do you strongly agree?

[IF MOVES TO Disagree]: Now I would like to do know: do you just disagree that [READ STATEMENT] or do you strongly disagree?

Codes for Q10-Q24

1= Disagree strongly

2= Disagree a little

3= Neutral: no opinion

4= Agree a little

5= Agree strongly

-97=(Do not read aloud): Refused

-99=(Do not read aloud): Don't know

Unanswered Questions which are asked

There are cases where the respondents will not answer an individual question, either because they do not know the answer or because they refuse to answer the question. If, after asking the question several times, you still cannot get a response, the following codes are used throughout the survey:

Refused-97

Don't know-99

However, these codes should be used very rarely. These codes should never be read aloud to the respondent and should be used only as a last resort. Supervisors will warn interviewers if they feel that the interviewer is unnecessarily or too frequently using these codes, as their excessive use may indicate a lack of effort on the interviewer's part to collect the required information from respondents.

Be cautious, only use these codes when absolutely necessary.

Skips and Question Order

In order to have a logical order to filling in the questionnaire, it has been designed with a system of skips that allows the interviewer to follow the logical sequence of questions based on responses to questions already provided. The survey program will automatically deactivate sections and questions that should be skipped.

In the case that a paper survey is being used, the double arrow symbol “>>” indicates that the interview should move to the question number or section indicated.

In the following example, if the respondent says “Yes,” she speaks on the phone, then you would continue on to question 7. However, if the respondent says “No” or refuses to answer the question, then you would skip to question 9.

Figure 3.10 – Skips Example

The figure consists of two side-by-side screenshots of a survey form, illustrating skip logic. Both screenshots show the question "Do you talk on the phone?" with four radio button options: "Yes", "No", "Refused", and "Don't know".

Left Screenshot (Path taken if "Yes" is selected):

- Question 1: "Do you talk on the phone?" (Selected: Yes)
- Question 2: "Whom do you primarily talk to on the phone?" (Options: Mother, Father, Maternal Grandmother, Maternal Grandfather)
- Question 3: "Do you send or receive text messages?" (Options: Yes, No, Refused, Don't know)

Right Screenshot (Path taken if "No" is selected):

- Question 1: "Do you talk on the phone?" (Selected: No)
- Question 2: "Do you send or receive text messages?" (Options: Yes, No, Refused, Don't know)
- Question 3: "Whom do you primarily talk to or text with on the phone?" (Selected: Mother)

It is critical to ask the questions in the order that they appear in order to correctly implement skip patterns in the survey. In the SurveyCTO tablet, there are questions that become activated and disabled based on responses to previous questions. If questions are not answered in the correct order, it may lead to errors in asking questions that should not be asked, or not asking questions that should be.

“Active Questions” and Keeping Adolescents Engaged

In the Core Respondent Module an effort has been made to incorporate activities into the survey to keep the interest of the 11/12-year-old respondent. It is very important to carefully explain the rules of the activity to the core respondent and to maintain the quality of data collection during these activities, although they should be fun and feel more relaxed for the respondent.

There are four types of activities that are integrated into the Core Respondent module, described in what follows.

1. **Green/Red/Yellow Cards:** The core respondent will select Green, Red, or Yellow cards according to whether they agree, disagree, or somewhat agree with a particular attitude or norm. Figure 3.11 presents an example of the instructions for this activity.

Figure 3.11 - Green/Red/Yellow Cards

Read: Now, I will ask you whether you agree, partially agree, or disagree with certain statements. People in the community have all kinds of different opinions. We have chosen some of them here. We are curious to hear if you agree with them or disagree with them. Please do not worry about giving us the correct answer, just tell us how you feel.

I have three cards here. GREEN for agree [**HOLD UP CARD**], YELLOW for somewhat agree [**HOLD UP CARD**], and RED for disagree [**HOLD UP CARD**]. I'm going to read you some statements and you can select whichever card represents the way you feel. If you agree with the statement with no reservations, select the GREEN card. If you somewhat agree with the statement, or generally agree but with some reservation or can think of exceptions, select the YELLOW card. If you disagree with the statement, select the RED card.

Record the appropriate code after the respondent selects the card.

2. **Sorting Beans:** When we ask the core respondent about his/her time use, we will give the respondent 24 beans that he/she will be asked to distribute across the time categories according to how many hours they spend doing each activity on a typical (school) day.
3. **Educational Testing:**
 - a. We will administer Raven's Colored Progressive Matrices test for the core respondent.
 - b. We will also administer the ASER Math and Reading tests. These tests are printed on paper and provided to the CR so that they can write and do work on the sheets.
4. **Drawing Exercise:** We will provide paper and colored pencils and will ask the CR to draw him or herself.

Equipment and supplies that the enumerator should have

Several pieces of equipment and props are needed for the core respondent module.

For each household interview, the following items are needed:

- **Samsung Tablet** for administering the questionnaire;
- **24 beans** for the time use question in the Core Respondent Module;
- **Time Use Category Card** to use for the Core Respondent section on time use;
- **Red, Yellow, Green Circle Cards** to use for the attitudes questions;
- **Pencils and Paper copies of the ASER tests** for the educational testing;
- **Raven's Cards** for the implementation of the Raven's Progressive Matrices Cognitive tests;
- **Paper and colored pencils** for Core Respondents to draw a self-portrait
- **A paper copy of each module of the household** questionnaire in case of a problem with the tablet;
- **A charger** for the tablet;
- **A pen** for notetaking;
- **A Notebook** to record any special notes;
- **A Folder** to carry all materials securely.

Appropriate Tablet Use

- Always close and lock the tablet right after using it by pressing the button on the top right side. It hides important information on the screen. You can also use this function in case you want to avoid changes on the screen while not using the tablet for a short while.
- You are not permitted to re-enter or edit the answers after completing the interview
- The tablet has a lock on all applications apart from the CTO. Neither you nor your supervisor can download or install any program onto the tablet.
- Always decrease the brightness of the screen (by scrolling down the main menu) once you have entered the household, in order to save battery life.
- Always switch off the sound of the tablet by pressing the volume button on the right side of the tablet before visiting the household, since sound may take away the concentration of the respondent.
- **You are NOT allowed to use internet on the tablet.**
- Frequently check the remaining battery charge. Do so especially before the interview starts and try to avoid charging the tablet whilst visiting the household. Do not start an interview if your battery is less than 30%, ask for a reserve tablet or charge the tablet during the interview. Make sure that when you start your day the battery is full charged (100%).
- **Only applications which are useful during an interview (e.g., calculator, notepad, etc.) can be used.**
- NEVER plug in any device other than your supervisor's computer.

3.5 Modules of the Household Questionnaire

There are two main modules that make up the Household Questionnaire:

1. Adult Female: This questionnaire is administered to the adult female in the household who is most responsible for caregiving and decision making for the core respondent. This module captures key characteristics of the household, as well as details of the adult female. This module will take approximately 2-2.5 hours.
2. Core Respondent: This questionnaire is administered to the selected 10–12-year-old and 15–17-year-old adolescent (including those sampled for the disability sample) and focuses on multiple dimensions of his/her life. This module will take approximately 1-1.5 hours.

The Core Respondent and the Adult Female module will be conducted in all households. Overall, the Household Questionnaire has 43 sections:

<u>Adult Female Module</u>	<u>Core Respondent Module</u>
1. HH Coversheet	25. Core Respondent Coversheet
2. Adult Female Coversheet	26. Education
3. Household Roster	27. Time Allocation
4. Family Background	28. Paid Work*
5. Durable Goods	29. Health and Nutrition*
6. Dwelling Characteristics	29.1 Core Respondent Disability and Functioning*
7. Shocks	29.2 Access to services
8. Safety Nets	30. Psychosocial and Mental Health
9. Investments in Children and Parenting	31. Resilience and Coping
10. Core Respondent Disability and Functioning*	32. Mobility, Voice, and Agency*
11. Access to Productive Capital	33. Makani Participation
12. Financial Inclusion and Economic Empowerment*	34. Social Inclusion*
13. Paid Work*	34.1 Social Support & Role Models
14. Refugee Status	34.2 Trust and Collective Action
15. Information and Communication Technologies*	34.3 Risky behaviors
16. Health and Nutrition*	35. ASER Educational Testing
17. Attitudes	36. Marriage and Relationships
18. Mobility Voice and Agency*	36.1 Marital History
19. Social Inclusion*	36.2 Knowledge and Opinions
20. Social Norms	37. Sexual and Reproductive Health
21. Trauma Symptoms	37.1 Sources of Information on SRH
22. Violence*	37.2 Fertility Desires
23. Contact Information	37.3 Attitudes
24. Adult Female Conclusion	38. Violence*
	38.1 Attitudes toward Violence
	38.2 Peer violence
	38.3 Violence in the home
	39. Financial Inclusion and Economic Empowerment*
	40. Information and Communication Technologies*
	41. Raven's Progressive Matrices Educational Testing
	42. Photo of Drawing
	43. Core Respondent Conclusion

* Sections are in both the Adult Female and Core Respondent Modules

Gray sections in the AF module of the survey are responded to by Adult Female caregivers of a Core Respondent in the Younger Cohort only.

Grey sections in the Core Respondent module are responded to by the Younger Cohort only. Bolded sections in the Core Respondent module are responded to by the Older Cohort only.

General information about the household is collected in the Adult Female Module. Other sections in the Adult Female module collect information related to the six capability areas of GAGE: education and learning, sexual and reproductive health and nutrition, voice and agency, bodily integrity and freedom from violence, psychosocial well-being, and economic empowerment. The Core Respondent Module also has sections covering these six capability areas, with sections and questions overlapping with the Adult Female Module so that intergenerational comparisons can be made between the Adult Female and Core Respondent.

Note that the AF Survey has some questions about the CR. These questions should be asked to the AF *not* to the CR. The survey should be conducted in complete privacy, so the CR should not be in the room when the AF survey is being conducted. Nevertheless, if the CR is in the room, do not

direct questions to the CR during the AF survey. Likewise, for each survey, questions should only be asked to the intended respondent.

3.6 Modules of the School Questionnaire

In addition to the Household Questionnaire, there is a School Questionnaire, which is administered to a number of key informants for a school in the community. It will be conducted by the supervisor and will take approximately 1 hour. The aim of this questionnaire is to gather additional information about access to and quality of schools in the area.

School Module

1. Basic Information
2. School Policies
3. Enrollment
4. School Programs

3.7 Respondent Scenarios

The following table includes different scenarios for who to seek as respondents for the AF survey in ordered progression starting with the preferred respondent.

Survey (to be filled out)		Scenarios				
AF		Look for an Adult Female . The key criteria for identifying the most-preferred AF Survey Respondent are: 1. Adult Female 2. (Most heavily) involved in decision-making or caregiving of the CR 3. Lives in household;	If Female Decisionmaker <u>does not</u> consent to be interviewed Look for another Adult Female in the household in this order: 1. Adult Female in the household involved in decision-making, caregiving for the CR 2. Adult Female in the household	Then look for an Adult Male in the household in this order: 3. Adult Male in the household involved in decision-making, caregiving for the CR 4. Adult Male in the household The AM will fill out AF if consent obtained	If no Adult willing to fill AF: Young CR: NO AF Older CR: CR fills out CR & AF	
	AF	CR is married	Look for an Adult Female in the household who is a decision maker (which could also be the CR)	Then, look for another Adult Female in the household in the household in this order: 1. Adult Female in the household involved in decision-making, caregiving for the CR 2. Adult Female in the household	Then look for an Adult Male in the household in this order: 3. Adult Male in the household involved in decision-making, caregiving for the CR 4. Adult Male in the household The AM will fill out AF if consent obtained	If no Adult willing to fill AF: Young CR: NO AF Older CR: CR fills out CR & AF
	AF	CR is living alone	Try and get parental consent. If can't, CR will fill out the CR & if old cohort the AF survey. Should follow skip patterns for non-decision maker			Young CR: NO AF Older CR: CR fills out CR & AF

4. Before going to the field

4.1 Field checklist

Before the interview make sure that you have all needed documents for the interview: tablet and charger, 24 beans and time use category cards, red/yellow/green cards, pencils and paper copies of the ASER test, Raven's cards, paper and colored pencils for self-portraits, consent forms, postcards, contact information cards for GAGE/UNICEF/UNHCR, paper copies of each survey, pen and notebook for notetaking, and a folder to carry materials.

Who is present in the interview: If as often happens, other people are present, try to ask whether it is ok for the child to be together just with you. If not try to minimize how many people are present by saying you will talk to other people later but right now the study wants to focus on young people's own words and experiences. In cases of children with a disability, very often they don't want to talk alone – and that is fine also.

Step 1: Introduce yourself and the project briefly:

My name is And I'm working as a researcher for the GAGE research project. In Jordan this is a partnership between Jordanian research organisations, as well as international partners. The project focuses on young people (10-19 years), the opportunities and the challenges they face.

I want to thank you for your willingness to participate in this interview and making the time.

|_ |

Step 2: Provide more background (while you show the consent form) and secure informed consent: Read the entire consent form to the participant and have them give their written consent or assent to the interview, depending on the respondent type.

Make sure to emphasize that their participation is voluntary and that even if they start the interview, they do not have to answer all of the questions and can stop at any time. Also make clear that their participation is confidential. Their identifying information will not be shared and only aggregative information we collect will be used for research purposes.

Please also make them aware that if they agree to be part of the study, the research team would like to revisit them/ their family once per year over the next five years. The purpose of this will be to understand how young people and their families are progressing over time.

|_ |

Step 3: Questions: Ask the participant(s) if he\she has any questions before starting the interview?

Inform the participants if they have any questions during the interview they can ask at any time.

|_ |

Step 4: Begin the interview by starting with the coversheet.

- Make sure you are talking to the correct person. Confirm that the Core Respondent name is the same as on the prefilled coversheet on SurveyCTO (both for the CR interview and the household roster). If the names are the same, but misspelled, this can be corrected during the Household Roster. **If the names are not the same, terminate the interview.**
- Go through all questions as they appear in the program. If someone is present during the start of the interview, politely ask them to leave from the beginning. If they refuse to leave, once again politely ask them to leave before starting the more sensitive questions that require privacy (refer to the manual for these sections). If they still will not leave, and are not a survey respondent, first try to have another enumerator/supervisor occupy them with the mock survey. The last resort is to skip these sections. Refer to the manual for the specific procedures here.
- If there are any issues during the survey, contact your supervisor or refer to the manual.

|_ |

Step 5:	At the end of the interview, collect the contact info and the photo of the ID (if they agree) and then end the survey program. Be sure that all the questions have been correctly answered before ending the survey as you cannot go back into the interview once you select end the survey collection form.	__
Step 6:	Thank the participants and assure them that you gained very good information. Remind the participant that the research team would visit their family once per year over the next five years, as it's a longitudinal study. Give the participant a card with GAGE contact number and inform them that can use it if they want to ask any questions or contact us after the interview.	__

4.2 Q&A - Questions and answers about GAGE study

This section includes common questions about the purpose of this study and the enumerator's role that might come up in the field. **IMPORTANT: It is essential that you familiarise yourself with the guidance below. This information should only be provided if asked by the respondents.**

Who gave you my name, why have I been in particularly selected to participate in this study?

You have been selected because you meet the selection criteria in this study which are applied to all participants. However, although we highly appreciate your participation in this study, participation is voluntary and optional.

Are you a part of UNICEF? Are you affiliated with UNICEF?

No. I am a researcher working for GAGE (The Gender and Adolescence: Global Evidence programme). In Jordan, we work in collaboration with UNICEF Jordan, but the research is an independent study funded by the UK Aid from the UK government. Any views shared during the interview are not endorsed by UNICEF.

Do you know anything about UNICEF's services?

As I am not affiliated with UNICEF, I do not know. But, I do have a UNICEF helpline number you can call.

How can I make sure that you are not connected or affiliated with official authorities or governmental bodies? Do you have links with the taxation system, political groups, etc.?

I am a researcher working for GAGE (The Gender and Adolescence: Global Evidence programme). We collaborate with UNICEF Jordan, but this research is an independent study funded by the UK Aid from the UK government and has nothing to do with official authorities or any other entities. The information you provide will not be accessible or used by anyone other than the research team. We don't have any links with other bodies and data will not be used against your best interests. It will not affect the tax you pay or the services you are entitled to receive.

Who is the donor, is there any external agenda behind it?

This research is entirely scientific independent study, funded by the UK Aid from the UK government, the agenda is totally scientific ones for the best interests of adolescents. It aims to explore what works best to support adolescents in the global south only and has been checked and approved by ethical clearance committees at both UK and domestically.

Why does this study matter? Why should I take part in it? What does participation involve? What are the benefits that I will gain from participation?

GAGE is a nine-year (2015-2024) research programme exploring the experiences of young people aged 10-19 years. Your participation is highly important as your opinion and perspective will help us to understand better the challenges and the opportunities for supporting adolescents. Your participation will support policy and programme actors to more effectively reach adolescent girls and boys to advance their wellbeing.

Is there any payment to compensate participants for their time? Are travel costs and other related expenses covered?

Azraq and Zaatari

Unfortunately, we cannot cover transportation costs, but a variety of refreshments will be provided. The interview will take place in a location nearby where you live to minimise your burden.

For host and ITS only

A variety of refreshments will be provided during the interview. If transportation to the venue is a concern, we can arrange to pick up your child/wife/other together with you or another chaperone if you would prefer.

What will happen if I refuse to participate in this study? What I am going to lose?

Participation in this study is entirely optional. Although you have the right to participate or refuse participation, we appreciate your voluntary participation. Refusal to participate will not affect the services you receive. All your rights and entitlements will not be affected by not participating.

Where does this study take place, who is the target, how can I find more about it? Who is in charge of it?

The GAGE programme is managed by the Overseas Development Institute, convenes many research, policy and programming partners globally and is funded by UK Aid from the UK government. The primary target is adolescents 10-19 years including particularly vulnerable ones like refugees, adolescents with disabilities, school dropouts, early married girls, adolescents' mothers. For more information you can call 0789411115 or visit our website www.gage.odi.org (give calling card).

What happens to the recordings? Who can have access to them?

At GAGE, we have a policy for data management including handling records with strict system to maintain confidentiality. Only the research team will have access to the recording, no one else can access them. All the materials including the recordings will be safely discarded.

How much time it takes to participate in the study?

For quantitative survey and qualitative study with nodal adolescents and caregivers

Your participation should not take longer than 2 hours.

Please note if you agree to be part of the study, the research team would visit your family once per year over the next five years. It is not a problem if you move but if you could let us know about your change of residence on this confidential number (0789411115) that would be most appreciated.

For qualitative study with non-nodal adolescents/caregivers only

Your participation should not take longer than 2 hours.

Will my name or personal information appear in the reports? Who will be informed that I am participating in this study?

Your participation is confidential, no one will be informed about your participation without your approval. Your name will not appear in any document. Data will be reported compiling responses from different participants. The responses you provided will be reported anonymously, we will not refer to your name or any personal information related to you.

Are you going to come back to me again after this interview? How many times and when?

For quantitative survey and qualitative study with nodal adolescents and caregivers

The research team would visit your family once per year over the next five years. It is not a problem if you move but if you could let us know about your change of residence on this confidential number (0789411115) that would be most appreciated. This study is a longitudinal, therefore we might get back to you for additional information.

For qualitative study with non-nodal adolescents/caregivers only

This study is a longitudinal, therefore we might get back to you for additional information. Participation in the research is voluntarily and on your free will.

How and where I can access the output of the study?

The outputs of this study will be disseminated through several methods. Findings will be presented at dissemination workshops with the involvement of respondents. Also, our publications will be posted at our website.

Can you help me access services? Is there any assistance you can provide? Can you help me us with cash assistance, medical assistance etc.?

As researchers, we cannot provide any direct benefits, services or assistance, but your insights and experiences will be very valuable in shaping the research findings which will be used to influence policies and programmes to improve the lives of young people and their caregivers.

5. Household Questionnaire

5. 1 Coversheet for Household Questionnaire

HH Cover

This section collects five critical pieces of information:

1. Location and Identification of the Household
2. GAGE Household Type
3. Parent/Guardian consent for the Core Respondent (CR)
4. Core Respondent Assent/Consent
5. Number of Household Visits

In addition, for the paper survey, the cover sheet collects information on the interviewer, supervisor, and office staff that entered, checked, and verified the survey data.

Location and Identification of the Household

Q1-2. The first set of questions collects information on the location of the household (country and enumeration area) and the household identification, assigned on the tracking sheet.

Q3. The interviewer confirms that s/he is speaking with the correct respondent by confirming the full name of the Core Respondent identified during the household listing. By **full name**, the survey is asking for the first, middle, and all relevant last names. For example, in Jordan, this would include both the Grandfather's and the Father's names.

Q4-8. The next set of questions asks for details on the household confirmed from the tracking sheet. In SurveyCTO, this information will be pre-filled according to the household listing data. The interviewer will confirm again that the correct household has been identified.

Confirm that the Household Head and Core Respondent name are the same as those in the household. Specifically, confirm that the names of the Household Head and Core Respondent candidate in the household match the information on the SurveyCTO tablet. If the names are the same, but misspelled, this can be corrected during the Household Roster. **If the names are not the same, terminate the interview.**

Confirm that the household location matches that of the information listed in the SurveyCTO screen. **If the location does not match, terminate the interview.**

GAGE Household Type

The cover sheet additionally confirms the classification of the GAGE household type. For the GAGE survey, there are 8 types of households. These questions classify the Household.

Q8. First, there are **Young Cohort** GAGE Households and there are **Old Cohort** GAGE Households. The **Young Cohort** GAGE Households focus on households with core respondents aged 11-12. The **Old Cohort** GAGE households focus on households with core respondents aged 15-17.

Q9. Second, there are households that are purposely sampled for core respondents with disabilities, so that there are **Disability Sample** GAGE households.

These two classifications will be indicated on the coversheet and are critical for determining the questionnaire modules that will be active in the Household Survey. The household classifications are indicated on the *Tracking Sheet* that is provided for each sampled household.

In SurveyCTO, this information will be pre-filled according to the household listing data. The interviewer will confirm again that the correct household has been identified.

First, confirm that the CR is the appropriate age for the Young Cohort or the Old Cohort, according to how the household has been classified. **If the Household is designated for Young Cohort and the CR is NOT 11-12, terminate the interview. Likewise, if the Household is designated for the Old Cohort and the CR is NOT 15-17, terminate the interview.**

Second, *if the household is in the Disability Sample*, the interviewer will confirm that the CR is disabled. **If the Household is designated for the Disability Sample, but the CR is NOT disabled, terminate the interview.**

Parent/Guardian consent for the Core Respondent

Q9. Obtaining consent for the participation of the CR in the study is necessary for the inclusion of the HH in the GAGE project. If consent for the participation of the CR is not obtained from a parent or guardian, terminate the survey. See **Section 3.2 Introductory Scripts and Consent**.

Core Respondent Assent/Consent

Obtain consent for an Adolescent CR living on his or her own or obtain Assent from an underage CR for whom consent has been given by the parent or guardian in Q9.

Number of Household Visits

Finally, the coversheet collects information on the number of household visits that are needed to complete interviewing the household. Each household will be visited a maximum of 3 times, if the household members are not located for interview in the first or second visit.

The interviewer indicates on the household coversheet whether s/he was able to locate a household member of interview. If a household respondent cannot be found, this will be indicated on the HH coversheet, and then the interviewer will go to the HH conclusion module (HH End) to fill additional information about why the HH was not interviewed during this attempt and whether an additional attempt will be made. This is explained in more detail in **Section 5.2**.

The procedure is followed for the second visit attempt. Again, if the household cannot be found, this is indicated in the HH coversheet, and then the Interviewer will go to the HH conclusion and provide information about why the HH was not located.

Upon the third visit attempt, if no one in the household can be located, the household is classified as not found, and will be replaced in the sample.

For Paper Questionnaires

Q10-12. If the survey is being conducted on paper, there is an additional section on the HH coversheet to collect information on the names of the supervisors and the individuals who checked and entered the paper survey responses.

Upon checking the survey, the supervisor needs to put his id, initials, and the date (in Gregorian date) of when it is complete.

Similarly, the same information is entered for the person who checks the survey (data manager) and the person who manually enters the survey responses to create a dataset.

Ideally, there will be close to no paper surveys filled. This is simply a back-up for an emergency situation.

5.2 Household Conclusion

HH End

The purpose of this section is for the enumerator to record information on whether the survey was terminated early, where the survey took place, the language of the interview, the enumerator's confidence in the quality of the responses, and whether there was any other person present during the interview.

If the interview is incomplete, record the degree of completion of the survey, whether the interview will be continued, or the reason that the interview will not be completed. If someone other than the intended respondent refused for the household, record the individual's relationship to the CR. In case the respondent wants to complete the interview later, the questionnaire will remain in the system for the future interview.

If the interview will be completed at a later date, please set a date and time with the respondent before leaving the household, if possible.

6. Adult Female Survey

The Adult Female Survey collects three categories of information:

1. Information on the household, including household roster and family background, durable goods, dwelling characteristic, and work activities;
2. Information on the Adult Female
3. Information on the Core Respondent.

For the first category of information, it is okay for the Adult Female to have another household member present to help her answer the questions.

For the second and third categories of information, **it is crucial that these questions are asked in complete privacy**. No other household members should be present. The need for privacy will begin with **Section 6.8 Investments in Children and Parenting**. This is clearly indicated on the survey instrument, and will also be indicated in this manual.

6.1 Adult Female (AF) Survey Coversheet

AF Cover

Introductory Statement

The Adult Female Survey Coversheet performs three functions:

1. Collects information on the date and time of the interview and the name of the interviewer collecting the data;
2. Records the identity of and outcome of the informed consent process for the Adult Female Respondent, and classifies the Adult Female Survey respondent as a **Female Decisionmaker**, a **Female who is not a decisionmaker**, or **male**, or an **Old Cohort Core Respondent**. Note that the Female Decisionmaker and the Female Primary Caregiver are the same individual.
3. Confirms the birthdate of the Core Respondent.

Interview Date and time and Interviewer Identification, Q1-4 (1-4)

Q1-2. The first questions of the Adult Female Survey Coversheet (AF Coversheet) collect information on the date and time of the interview. Record the date using the local calendar.

The start time of the survey is recorded automatically in SurveyCTO by hitting the “Next” button at the start of the survey. If a paper version of the survey is used, record the started time of the surveying using the 24-hour clock. For example, if it is 2:24pm, the interviewer would enter 14:24.

Q3-4. The final piece of information collected in the first section of the AF coversheet is the Name and ID of the interviewer. In SurveyCTO, all interviewers are pre-entered into the program, so the interviewer will simply select his or her name from a dropdown menu. On the paper survey, the interviewer will write his or her name and ID. It is important for the Interviewer to know his or her ID.

AF Respondent Identification and Consent

This next section of the survey asks for the full name of the respondent for the Adult Female Survey and for the outcome of the informed consent process.

Q5-6. Recall that the preferred respondent for the Adult Female Survey is the **Female Decisionmaker** for the selected Core Respondent. The interviewer will find this individual and go through the informed consent document for the survey. Please refer to section **3.2 Introductory Scripts and Consent**. At the end of going through the consent form, the interviewer will record whether she has agreed to be interviewed.

Q7-8. These questions identify who the AF respondent is.

If the **Female Decisionmaker** consents to be interviewed, the interviewer will indicate that she is the respondent to the Adult Female Survey and move on to confirming the Core Respondent's age.

If the **Female Decisionmaker** does not consent to be interviewed, the interviewer will try to find an alternative respondent according to the following priorities.

1. The interviewer will look for another **Adult Female** in the household.

If there is not another adult female in the household, OR the adult female does not consent, then

2. The interviewer will look for an **Adult Male** in the household.

If there is not an adult male in the household, OR the adult male does not consent, then there are two ways forward, according to whether the Core Respondent is in the **Young Cohort** or **Old Cohort**.

If the Core Respondent is in the **Young Cohort**:

- 3a. The Adult Female survey will not take place. The Interviewer will move on to interview the Core Respondent

If the Core Respondent is in the **Old Cohort**:

- 3b. The Core Respondent may respond to the Adult Female Survey

If one of the above-specified respondents are found and consent to be interviewed, the interviewer will record the identity of the respondent to the Adult Female Survey. If the respondent is not the Adult Female Decisionmaker, the interviewer will record why the Adult Female Decisionmaker was not interviewed.

Core Respondent Age

Q8a, 8b, 8c. This set of questions verifies the date of birth and age of the CR.

- For the **Young Cohort** the CR must be 10, 11, or 12 years old.
- For the **Old Cohort** the CR must be 15, 16, or 17 years old.

Adolescents outside of this age range should not be interviewed, so it is important that the interviewer is confident that the CR is within the appropriate age range.

Ask the AF Respondent if s/he can provide verification of the CR's birthdate through official documents, memory of a household member, or some other method. The interviewer should attempt to confirm the birthdate first through official documentation. Always try to get official documentation, such as a birth certificate. If official documentation is available, indicate what documentation was provided. The most comment types of documentation are pre-listed. If the utilized documentation is not on the list, the interviewer should specify the type of documentation.

After prompting, if no official documentation is available, confirm the birthdate by the respondent's memory.

The interviewer should indicate the birthdate using the local calendar, and confirm that the birthdate falls within the eligible range. It could be the case that the household does not know the exact month of birth of the CR, but does know the year. For this reason, SurveyCTO will validate the age of the CR using only the year of birth.

If the survey is being given in 2018, then the young CR will be considered eligible if s/he is born between 2005-2008.

If the survey is being given in 2018, then the young CR will be considered eligible if s/he is born between 2000-2003.

If the year of birth falls into the appropriate range, the interviewer should continue with the survey. If it does not, the interviewer should stop the interview and move on to the next household.

If the AF Respondent is not able to confirm the birthdate, but states that the CR is in the appropriate age range, the interviewer should assume that the CR is in the appropriate age range and proceed with the survey.

Adult Female Nationality

Q9. This question verifies the nationality of the AF Respondent.

6.2 Household Roster

Introductory Statement

This module is designed to gather information about members of the Core Respondent's and Adult Female's household. **It is ok for the respondent to ask for help from a spouse or household member to answer these questions.**

The household roster has 6 sub-sections:

1. Complete listing of all household members
2. Household Member Details, which collects specific details about all household members, with a focus on the AF, CR, Household Head
3. Information on migration history of the Household Head
4. Information on migration history of the CR
5. Native language of the household
6. The closest age sibling of the opposite gender to the CR

The household roster should include all individuals that live in the household *regardless* of whether the individual is related to the AF or CR by blood. These individuals do not have to be family members, so long as the household is their main place of residence and a single budget is shared to meet their needs.

HH Roster Part 1

Complete Listing of Household Members

Q1-3. In this stage of the household roster, the interviewer is collecting information on each household member's name (Q1) and role in the household (Q3). Four different prompts will be used to ensure that all members of the household are listed in the roster, detailed below. In Q2, record which prompt was used to elicit the household member.

This first section of the household roster collects information on individuals who live in the household and who share a common budget. Note that household members are not necessarily related by blood or marriage, and that not all who are related and are living in the same compound or dwelling are necessarily members of the same household. The key criterion is that there is a common housekeeping arrangement with a common budget.

After the initial household roster is collected there are three additional prompts that will collect information on additional individuals that GAGE is interested in learning about, but who are not typically considered part of the household.

To begin the household roster, ask the AF to list all members of the household, using the following prompt:

Read aloud:

“First, we are going to talk about your household. If you need other members of your household to help you answer any of these questions, that is fine. Later in the survey we will discuss some more private issues where it will be important to speak to you alone. Now I would like to find out about all of the individuals in your household. By household, I mean the place where you and [CR name] usually sleep, not necessarily your ancestral lands or family home. By the individuals in the household, I mean those who ‘eat from the same pot’.”

After reading this initial definition of the household, begin listing household members. The first household member listed should be the household head. Read:

“Let's start with the household head. What is this person's full name?”

Answer Q1-3 in the first row for the household head:

Q1. Enter the full name of the respondent, including the first name, middle name, and both the father's name and the grandfather's name. If the respondent has a nickname, please enter that in parenthesis at the end of the household member's full name.

The head of household is the person commonly regarded by the household members as their head. The head is often, but not always, the main income earner and decision maker for the household. The household head may not reside at the home, for example if s/he is working as a migrant

elsewhere and sending income back to the household. Interviewers should accept the decision of the household as to who is the head and list this individual first on the household roster.

Q2. Indicate which prompt (discussed below) was used to elicit the details of this household member. There are three different prompts to elicit additional household members after the initial list is generated. If the household member is entered after the initial household definition, then select “Everyone Else,” indicating that no prompt is used. If the household member is entered after one of the subsequent prompts, select “Prompt #1,” “Prompt #2,” or “Prompt #3” accordingly.

Q3. Indicate the role of this member. There are 5 respondent-types that we are particularly interested in:

- (1) Household Head,
- (2) Respondent to the AF Module,
- (3) Core Respondent
- (4) Female Primary Caregiver (Decisionmaker) for CR,
- (5) Male Primary Caregiver (Decisionmaker) for CR.

More than one of these types could apply to a single individual. Indicate all that apply. For example, the **Respondent to the AF Module**, in most cases, will also be the Female **Decisionmaker for the CR**. The **Respondent to the AF Module** could also be the **Household Head**. In this case, please select items (1), (2), and (4). Likewise, the **Household Head** may be the **Male Decisionmaker** for the CR, in which case, select items (1) and (5).

If none of these household member types apply to the listed individual, select item (0) Everyone Else.

Example. For the household head, enter his or her name (and nickname) in Q1 and “None” for Q2. Select “HH Head” in Q3. If the AF is the household head, select both code (2) - “Respondent to the AF Module” AND code (3) - “HH Head” in Q3.

Then continue to collect information on the rest of the household members. Read aloud:

“Thank you. Now please tell me the full names of all other household members. If the member has a nickname, please also let us know the nickname.”

Repeat Questions 1-3 for all members of the household.

Each time the respondent stops listing members, ask “Anyone else?” Repeat the household definition “By the individuals in the household, I mean those who ‘eat from the same pot’.” as necessary. For all household members who are added to the roster based on the household definition, select “Everyone Else” for Q2.

Once the respondent insists that there is no one else in the household, read the following three prompts to add additional household members. These prompts are added to include individuals who are not typically considered to be household members by standard definitions of the household, but who the GAGE project is interested in learning more about.

1. “Just to make sure that I have a complete listing, are there any other people such as small children or infants that we have not listed?”

Answer questions 1-3 for each additional household member that the respondent lists. Select “Prompt #1” in Q2 for all members added after this prompt. When the respondent says that there is no one else in the household according to this prompt, move onto the next prompt.

2. “Are there any other people who may not be members of your family, such as domestic servants, lodgers, or friends, who usually live here but may not “eat from the same pot”?”

Answer questions 1-3 for each additional household member that the respondent lists. Select “Prompt #2” in Q2 for all members added after this prompt. When the respondent says that there is no one else in the household according to this prompt, move onto the next prompt.

Note that for an individual to be included through this prompt, they must live at the household. For example, for an individual to count as a “lodger”, s/he should live (sleep) at the household.

3. “Are there any other people that are typically members of your household but have lived elsewhere for 3 months or more due to migration for work?”

Answer questions 1-3 for each additional household member that the respondent lists. Select “Prompt #3” in Q2 for all members added after this prompt.

For example, if the biological mother of the CR works in another country currently but will come back in the future, she should be added to the roster through this prompt

After the respondent insists that all members of the household have been listed, move on to answer additional details about each household member.

HH Roster Part 2

Household Member Details

These questions collect additional information about each household member that was listed in questions 1-3.

Questions 4-15 are asked for all household members unless skip patterns specify that the question is skipped for that household member based on age or response to prior questions. After completing all relevant questions for a household member, move on to next household member.

Q4. This question is to determine the gender of each member of the household. Mark “1” for Male and “2” for Female.

Questions 5-7. Ask for the relationship between each household member and key members of the GAGE household. Specifically, for each household member, the survey asks for his or her relationship with the Household Head, the Core Respondent, and the Adult Female Module Respondent. Select the appropriate relationship from the dropdown on SurveyCTO. If you are using the paper questionnaires, use the G1 codes to record the relationship.

Q5. This question is to determine the relationship of each household member to the household head. The relationship is defined in relation to the HH head. Please see some examples:

- **The HH member in question is the CR and the HH head is the CR's father:** then the relationship of the CR to the HH is "Daughter" or "Son."
- **The HH member in question is the AF and the HH head is the AF's husband:** then the relationship of the AF to the HH head is "Spouse/Partner"
- **The HH head is the father of the HH member in question:** then the relationship of the HH member to the HH head is "Son" or "Daughter"

Q6. This question is to determine the relationship of each household member to the Core Respondent. The relationship given here is defined in relation to the CR. So, if the HH member is the CR's father, please select "Father."

Q7. This question is to determine the relationship of each household member to the Adult Female Module Respondent. Again, the relationship given here is defined in relation to the Adult Female Respondent. So, if the AF is the HH member's niece, then the relationship of the HH member to the AF is "Aunt" or "Uncle."

Q8. This question is to determine the age of each household member. Encourage respondent to estimate if they are unsure. If the respondent is struggling to remember or estimate, prompt for the year of birth of the individual, asking the respondent about key events that may have occurred around that time.

If the household member is younger than 1 day old, write 1 day.

If the household member is younger than 2 months old, enter days only.

If the household member is younger than 6 years old, but older than or equal to 2 months old, enter years and months.

If the household member is older than or equal to 6 years old, enter years only. Round the age down to the nearest age. If the individual is 15 years and 9 months, then this individual should be listed as being 15 years old.

If an individual is younger than 2 years old, proceed to the next member of the household. If they are older than 2 years old, proceed to Question 9.

Q9. This question is to determine the highest level of education for each household member.

Notice that this question is asking for the highest level of education *attended*, not necessarily *completed*.

For example:

- If the individual is currently attending school and is in Primary (Grade 3), select the code for "Primary (Grade 3)" even though the individual has not yet completed this grade.
- If the individual is no longer in school and dropped out of school in the middle of Primary (Grade 3), select the code for "Primary (Grade 3)" even though the individual did not complete this grade.

Record each response using E1 codes if conducting the Survey on paper.

In SurveyCTO, if the response to Q11 is “Other” then Q12 will activate and provide space to specify the “Other” level of education. It is important to provide a description of what the “Other” level is. Do not leave this blank.

If “no schooling,” AND the respondent is <5 years old, move on to the next household member.

If “no schooling,” AND the respondent is ≥5 years old skip to question 12.

Otherwise, continue to question 10.

Q10. This question is collecting information on *completed* schooling qualifications. It does not matter if the individual is currently working toward a new qualification, the highest qualification earned up until this point should be recorded.

For example, if the individual has earned his or her secondary school degree and is currently attending school to earn his or her Bachelor’s degree, record the code for secondary school because the individual has not yet earned the Bachelor’s degree.

Record using E2 codes.

In SurveyCTO, if “Other” is selected for Q10 will activate and provide a space to specify what the “Other” qualification is. It is important to provide a description of the “Other” Qualification. Do not leave this blank.

If the household member is older than 25 years old, skip to Q12.

Q11. Read either:

If school is in session: “Is **[NAME]** currently attending school?”

If school is not in session: “Was **[NAME]** attending school when it was last in session?”

If the household member is younger than 5 years old, move to the next member of the household. SurveyCTO will automatically deactivate further questions for this individual. Otherwise, continue to question 12.

Q12. Use L1 codes to record **[NAME]**’s primary daily activity. If the individual has more than one daily activity, the primary daily activity is the activity that the individual spends the most time doing, NOT the activity that the individual earns the most from.

If the household member is NOT the household head, AF respondent or CR, skip to the next household member. Otherwise, continue to the next question.

Q13. This question asks for the relationship status for each household member.

If the individual has a long-term, co-habiting monogamous relationship, “Monogamous Married or non-formal union” should be selected, even if that individual is not formally married. Likewise if the individual is in a long-term, co-habiting polygamous relationship, “Polygamous Married or non-formal union” should be selected, even if that individual is not formally married. Think of these

“non-formal” unions as relationships where the individuals are living together as though married, even though no official ceremony has occurred.

“Separated” is distinct from “Divorce” in that the individual is still married and maintains legal rights that come with marriage, although the individual is not currently living with the partner and not carrying on a relationship with his or her spouse. In “Divorce,” the individual is no longer married to their previous partner and is not currently engaged in a new relationship.

If the individual was “Divorced” in the past but currently is currently in a long-term, co-habiting marriage or union, select “Monogamous Married or non-formal union” or “Polygamous Married or non-formal union” as appropriate.

If the respondent is the **Household Head, Adult Female Respondent, Core Respondent, Primary Female Caregiver**, or the **Male Primary Caregiver** AND the respondent does NOT respond to Q14 with 6=Never Married or -97=Refused/-99 Don’t know, move on to question 15.

Otherwise, move on to the next household member.

Q14. Read aloud either:

For formal unions: “At what age did **[NAME]** first get married?”

For non-formal unions: “At what age did **[NAME]** first begin cohabitation?”

Record age in years. It is okay to help the respondent determine the age that the individual was married if she is having a hard time remembering. For example, if the respondent is unsure of the age, ask:

“How many years ago was **[NAME]** married?”

Use this information paired with respondent age to determine age at marriage.

Q15. Indicate whether the household member can read and write.

Household Head

This next set of questions ask when the household head located the household in the current location, the birthplace of the CR, and the language spoken in the household.

Q17. This question asks for the year that the **Household Head** moved to this current location. If the Household Head moved to this location, record the year, and continue to answer parts a-h

If the Household head was born in this location, record code 2, and skip to question 19.

Q17a-d/e/f. Record the location that the Household Head was born. This includes recording the Country in part (a) and all sub-geographical divisions that are relevant for the specified country in parts b-d/e/f.

In SurveyCTO, the program will automatically bring up the relevant geographic sub-unit codes to enter. There are pre-specified codes for Jordan (Q17b-e). Note that each country has its own number of geographic sub-units.

Q17b-e. If the Household Head was not born in one of these pre-specified countries, enter the relevant geographic sub-units manually. In this case, there will only be space for 3 geographic sub-units (Province/Region, District/County, Sub-district/sub-county), regardless of individual country-level specificity.

Core Respondent

Q18. This question asks where the CR's mother was living when the CR was born (If the Core Respondent's mother was living in this location when the CR was born, skip to Q19). The purpose of this question is to understand if the household has moved locations since the birth of the CR. This question is asked this way in order to understand the location of the household at the time that the CR was born, not necessarily *where* the CR was born.

Q18a-f . Record the location that the mother lived when the **Core Respondent** was born. See explanation for Q18b-f for more detail.

Q18g. Record the year that the Core Respondent moved to the current location.

Q19. Use G2 Codes to record the Primary Language spoken in the household. If "Other" is selected, specify what the "Other" language is.

In SurveyCTO, the languages are pre-listed in a drop-down menu. Selecting "Other" will activate a space to specify the "Other" Language. Please specify what the "Other" language is. Do not leave this blank.

Closest age sibling of opposite Gender (4.4)

Q16. SurveyCTO will identify the ID code of the closest age child (under age 18) of the opposite gender in the household based on the information entered into the household roster. If there is no child of the opposite gender in the household, SurveyCTO will identify this as well. This information will be listed in blue at the bottom of the completed household roster on the module screen.

If using a paper survey, please indicate the ID Code of the closest age child (under age 18) of the opposite gender in the household, in comparison to the CR. If there is more than one child of the opposite gender who is of an identical age difference from the CR, please choose the older child if the CR ID is even, and the younger child if the CR ID is odd. Use -98 if there is no child of the opposite gender in the household.

6.3 Family Background

Family Background

Introductory Statement

This module is designed to gather information about the Core Respondent's and Adult Female's family background. **It is ok for the respondent to ask for help from a spouse or household member to answer these questions.**

The Family Background Section provides information on the CR's:

1. Biological Father
2. Biological Mother
3. Siblings

CR's Biological Father

The first set of questions asks about the CR's biological father.

Q1-2. These questions confirm the inclusion of the biological father on the Household Roster. If the father was indicated in the Household Roster, Q1 confirms that this individual is the natural (biological) father of the Core Respondent. If this individual is the biological father, skip to Q6.

If the individual is NOT the biological father, Q2 asks if the biological father is listed on the household roster.

If the father was NOT included in the Household Roster, Q2b (1) asks for his full name. Continue to Q3.

Q3-4a. Q3 asks if the father is still alive. If he is alive, skip to Q5. If he is NOT alive, Q4-4a ask for the year of his death and his age of death. Move to Q5.

Q5. Record the highest level of education of the Biological Father. Notice that this question is asking for the highest level of education that the biological father has *attended*, not necessarily *completed*.

CR's Biological Mother

This next set of questions asks about the CR's biological mother.

Q6 . This question asks if the respondent is the biological mother of the CR. If Yes, skip to Q13. If not, continue to question 7.

Q7-11. These questions exactly mimic questions 1-5 about the biological father.

Q12. This question gets information on the age of marriage of the biological mother the CR in the case that she is not the Respondent to the AF module.

Core Respondent's Siblings

The next set of questions asks about the Core Respondent's siblings in order to determine where the CR is in the birth order of his or her siblings, as well as whether any siblings are married and the youngest age at which a sibling was married.

The Core Respondent's siblings share either a biological mother or a biological father or both with the CR. Therefore, 'half siblings' should be included.

Q13-13a. Q13 asks how many *living brothers* the CR has. Record the number. If the CR has 0 living brothers, skip to question 14. Otherwise, continue to Q3a. Q3a establishes birth order and asks how many of the brothers are older than the CR.

Q13b-13c. Q13b establishes whether *any* of the CR's male siblings are married. If *at least one* male sibling is married, Q13c asks the *youngest* age at which a male sibling was married.

Q14-14c. These questions exactly replicate Q13-13c for *living sisters* of the CR.

6.4 Durable Goods

Home and Household, Durable Goods

Introductory Statement

This section collects information about items that the household may own. The purpose of this section is to gain information about the household wealth. **It is ok for the respondent to ask for help from a spouse or household member to answer these questions.**

Quantity of Durable Goods Owned

Q1 . The first set of questions asks about durable goods (or assets) the household may own. Select the relevant country and ask whether the household owns each specified item in the list. If the household has the item, ask how many of the item the household owns.

For certain items, we only want to know about them if they are *working*. By working, we mean that it has the capacity to work. For example, the refrigerator, if plugged into electricity would work; or the car, if it had gas in it or the battery was charged, it would work, etc.

It is important to **ask** the respondent if the household owns each item. Seeing the item in or around the dwelling does not mean that the household has **ownership** over the item. Do not assume.

It is also important to distinguish between household-owned durable goods and productive or business-owned durable goods (i.e., business assets). This section is asking only about **household owned** durable goods. The primary criteria that should be used to determine whether a durable good is a household asset or business asset. If the good is primarily used by the household, then it is a household asset.

If the household owns a shop where there is a refrigerator, determine whether or not it is an asset according to how it is used. If the household stores food and drinks for household member consumption, then count it as a household durable goods. If the refrigerator is primarily used by the business (i.e., a drink fridge for drinks that are for sale), then the refrigerator is a business asset and should not be counted in this section.

6.5 Dwelling Characteristics

Home and Household, Dwelling Characteristics

Introductory Statement

This next set of questions asks about the characteristics of the household's dwelling. **It is ok for the respondent to ask for help from a spouse or household member to answer these questions.**

This section asks about:

1. Dwelling Ownership and Type
2. Dwelling Construction Materials and Number of Rooms

3. Cooking Fuel and Location
4. Access to Electricity and Water
5. Toilet Facilities

Dwelling Ownership and Type

Q1-1a. Q1 asks the status of the household's ownership of the dwelling. Definitions of trick response codes are as follows?

- **"Being purchased"** refers to a home that the household is in the process of coming to own. It is a house that you still owe money on (e.g., mortgage, making payments, etc.) or are still in the process of building.
- **"Employer provided"** refers to a home that an employer is allowing the household to live in, in exchange for some form of work.
- **"Free, authorized"** refers to a home you are living in for free and you have permission to live there.
- **"Free, not authorized"** refers to a home you are living in for free, but you do not have permission to live there. For example, you moved into an abandoned property. "Rented" should include government subsidized housing.

If the home is owned or being purchased, continue to Q1a to ask about whether the household has a deed. Otherwise, proceed to Q2.

This question is specifically about the ownership of the dwelling that the household lives in, not the land that the household is on. It is possible that the government owns the land, but the household owns the building or structure in which household members reside. In this case, the correct response is "owned."

Q2. This question asks about the type of dwelling. "Establishment/Workplace" is for households who live in the same building as the business that they work or own.

Dwelling Construction and Number of Rooms

Q3-5. These three questions ask about the primary building material of the dwelling's outer walls, roof and floor, respectively. In all cases, indicate the primary material. By primary material, we mean the material that is used for a majority of the structure or surface.

Q6. This question asks the number of separate rooms in the dwelling. This should count the number of rooms in the main dwelling plus any dwelling units, if the house is comprised of several dwelling units. Rooms can be separated by permanent walls or by semi-permanent dividers, such as sheets. Exclude storerooms (closets) or toilet rooms in the count.

Cooking Fuel and Cooking Location

Q7. Ask about the main source of cooking fuel for the household. If more than one source of fuel is used depending on what the household is making, then prompt the respondent to identify the source that s/he uses most often. If no food is cooked in the household, skip to Q10. Otherwise, continue to Q8.

Q8. Ask if the cooking is usually done in the house, in a separate building, or outdoors. If the cooking is done in a separate building, outdoors, or in some “other” location, skip to question 10. Otherwise, if the cooking is done in the house, continue to question 9.

Q9. This question asks if a separate room is used as a kitchen. Indicate yes or no.

Access to Electricity and Water

Q10-10a. Ask about the main source of light for the household at night. If the response is “electricity meter-private” or “electricity meter-shared”, proceed to Q11. Otherwise, continue to Q10a. This question asks if the electricity is metered. This question is not asking if electricity is working right now, but whether there is a meter.

Q11-12. These questions ask about the main source of water for the household over the past 30 days. Q11-11a ask the main source of water and its location.

If the water source is located elsewhere away from the dwelling, Q11b asks the time to get to and from the water source in minutes. If the water source is located in the dwelling or in the yard/plot of the dwelling, then skip to question 12.

Question 12 asks whether the household treats the water to make it safe to drink. If the household does not treat its water, skip to Q13. If yes, Q12a asks what they do. For this question, circle all responses that apply as the household may use multiple methods to clean the water.

Toilet Facilities

Q13. These questions ask about the type of toilet facility the household typically uses (Q13). See definitions of toilet types below. If the response to Q13 is “No facility / bush / field,” skip to Q14. Otherwise continue to Q13b.

- **“Own flush toilet”** refers to your family, flush toilet refers to any toilet that has a flush system (e.g.: Turkish toilet that has a flush system)
- **“Shared flush toilet”** refers to sharing with other families not in the same house as you, flush toilet refers to any toilet that has a flush system (e.g.: Turkish toilet that has a flush system)
- **“Own traditional pit toilet”** refers to your family, pit toilet is just a hole in the ground, not connected to a plumbing/piping system
- **“Shared traditional pit toilet”** refers to sharing with other families not in the same house as you, pit toilet is just a hole in the ground, not connected to a plumbing/piping system

Q13a-b. This question asks how many households use the facility other than the respondent household (Q13a) and how long it takes to reach the facility and return to the dwelling in minutes (Q13b). If the toilet facility is located at the respondent’s home in Q13b, use code “-98”.

6.6 Shocks

This module asks about shocks, or “situations that may have challenged the household in the past.”

Q1. This questions about the most significant, negative shock or challenge to happen to the AF Respondent in the last 10 years. Responses should not be read aloud.

Q2-3. Following Q1, Q2 asks about the year the most significant negative shock in the last decade happened. Then, Q3 asks about which country the AF Respondent was located in when the shock happened (ex: Jordan, Syria, Palestine, Iraq, Egypt, Pakistan, or another country).

Q4. This question also refers to the most significant, negative shock or challenge identified in Q1, asking about the main thing the AF Respondent did to help overcome the shock/challenge. The question then asks for the **second** main thing the AF Respondent did to overcome the shock/challenge.

Q5. This question asks about the main ongoing shock/challenge faced by the AF Respondent/household. Then, the question asks about the **second** main ongoing shock/challenge. Note that once again, the responses should not be read aloud.

Q6. Following Q5, this question first asks what the main thing is that would need to change in order to completely overcome the first, main ongoing shock/challenge faced by the AF Respondent/household.

Second, Q6 asks about the main thing that would need to change in order to completely overcome the **second** main ongoing shock/challenge faced by the AF Respondent/household.

6.7 Safety Nets

This module asks about safety nets from which the household currently benefits (or has benefited from in the past). Safety nets include “any government assistance programs, or from community, church, or other non-governmental assistance programs.”

The module asks a series of questions for each of 6 specific programs—as well as any support from landlords or neighbours—including:

- **Item A - UNICEF/UNHCR Cash Transfer Program (not including Hajati)** is provided for some refugee households living in Jordan.
- **Item B - UNICEF Hajati Program** is a program to support school enrollment. Both refugee and non-refugee households may be eligible to receive Hajati.
- **Item C - World Food Programme Food Voucher** is a food assistance program provided for some refugee households living in Jordan.
- **Item D - Winterization Benefits** refers to resources provided to help keep the household warm during the winter months.
- **Furniture or durables from landlord or neighbours.** This question aims to capture support the household may have received from their landlord or neighbours.
- **Item F - Cash for Work programs** are available to some households living in refugee camps in Jordan.
- **Item G – UNRWA Food Assistance E-Cards** are available to some Palestinians living in Jordan.

The module also asks the same series of questions for “any other cash transfer program” that the household may receive (**Item H**), as well as up to three additional programs that the household has benefited from in the last 12 months (**Item I**).

The questions asked for each program include:

Q1. This question asks about if anyone in the household ever benefited from this type of assistance.

Q2. Asks to specify the name of the program or organization that provided assistance (only relevant for Item H and Item I).

Q3. This question asks about the year that the household first started benefiting from this program

Q4-5. This question asks about if the household is still benefiting from this program; if not, Q5 asks what year the household stopped benefiting from the program.

Q6. This question asks about what was typically received as a benefit from this program. Respondents may have more than one response, to potentially include: 1) Money, 2) Food, 3) A job, 4) Training, 5) Credit, or something else (specify).

Q7. This question asks about which household member (or members) were directly benefiting from this program. Answers may include “All household members”, or the respondent may list household members who benefited from the previously-entered household roster.

Q8. Finally, if the household received cash from the program, this question asks the typical amount of cash (in JOD) that the household usually received *per month* during the time the household was benefiting from the program.

6.8 Investments in Children and Parenting

Parenting

From this point forward in the survey COMPLETE PRIVACY is critical. Please ask all household members to leave the room and wait for all household members to leave the room before continuing the survey. DO NOT CONTINUE THE SURVEY BEFORE TAKING THE NECESSARY MEASURES TO ENSURE PRIVACY.

If PRIVACY CANNOT BE ENSURED after taking necessary measures, including providing the mock survey, skip the following sections in the AF survey: MVA, Attitudes, Social Norms, and Violence.

From this point, it is necessary to keep track of any household member who may come into the room during the interview. Always promptly and politely ask him or her to leave before proceeding with the survey. Take note of who the household member is.

Also starting from this point in the survey, there will be skip patterns for sections according to the **Household Type** indicated on the Household Coversheet and the **Respondent to the AF Module** indicated on the AF Coversheet. SurveyCTO will automatically disable/enable the appropriate sections. **If you are using the paper survey, pay careful attention to these skips at the top of the sections.**

This section is for the **Young Cohort** only. If CR is part of the **Old Cohort**, skip to next section.

Introductory Statement

This section of the module asks questions about a variety of topics related to parenting of the CR and, for a subset of questions, the sibling. **This section should be conducted in complete privacy.**

- If the respondent is male OR a female who is NOT a decisionmaker for the CR, skip to the next section, ***Core Respondent Disability and Functioning***.
- If the respondent is in the **Old Cohort**, skip to ***Capital***

This survey section asks about parental involvement in 5 areas:

1. Schooling
2. Time Spent with CR
3. Health
4. Interactions
5. Expectations and Aspirations

In each subsection, the survey asks about the CR and the closest-age sibling of the opposite gender. If there is no such sibling in the household, skip the questions about the sibling.

Parenting, Time Spent with CR

Q1. This question asks whether the AF spends time with the CR. If yes, 1a asks the main activity that the AF does while she is spending time with the CR. If no, move to question Q2

Q2. This question asks whether the AF has ever been to a Makani information session. These are sessions put on by the Makani centers sometimes to inform parents of Makani activities and get them involved.

Parenting, Health

Q2-5. These questions elicit information whether the AF usually takes the CR to a modern or official healthcare facility in response to an illness or injury and whether there have ever been barriers in doing so. If there are barriers, then question 9 asks what those barriers are.

Parenting, Schooling

Questions 6 and 7 asks about things that the Adult Female Decisionmaker does to support the Core Respondent in his or her school work and the level of schooling she would like him or her to achieve. A subset of the questions are asked about the opposite gender sibling closest in age to the CR in questions 10 and 11.

Q6a-g. These questions ask ways that the AF Decisionmaker supports the CR in his or schooling, including assisting, lessening chores, providing space to study, purchasing books, purchasing uniforms, and paying for transportation.

Q7. This question asks what the highest level of schooling the AF respondent would like the CR to achieve.

Q9. Check if the household has a sibling sampled to be interviewed. If there is a sibling to be sampled, and the sibling is currently in school, continue to Q4. If there is a sibling to be sampled, and the sibling is not in school, skip to Q6.

Q10a-c, 11. Q10 asks a subset of questions from Q6 about the CR's sibling and Q11 asks what the highest level of schooling the AF respondent would like the CR's sibling to achieve.

Parenting, Interactions

Q12-13. This set of question asks about what the respondent talks about with the CR (Q12) and his or her opposite gender, closest age sibling (Q13). The topics are education, type of work in the future (10 and older), marriage expectations (10 and older), expectations and opportunities of boys versus girls, religion, and refugee experience.

Q14-15. These questions ask about the ways the AF teaches the CR and his or her sibling the right behavior. The questions ask about six strategies to address behavior problems, ranging from taking away privileges to beating him or her. Each strategy is asked of the CR and the sibling, if there is one.

Q16. This question asks if the AF believes that physical punishment is necessary to raise a child properly.

Parenting, Expectations and Aspirations

Q17-18. This set of questions asks about the hopes and expectations the AF respondent has for her children. For the CR (Q15) and the sibling (Q16), these questions ask the AF the age at which she expects the CR (sibling) to do or accomplish certain things, such as complete his or her education, leave the household, or have a child.

Q19-20. These questions ask the career that the AF would like the CR (Q19) and sibling (Q20) to have.

Q21-22. These questions ask about parenting decisions around technology, and specifically if the AF respondent allows the CR to use the internet (Q21) or use a cell phone (Q22).

Q23-26. These questions are only asked to those households that are not Jordanian. The questions ask about the AF's hopes for her children to return to the family's home country and if she has changed her parenting style. These questions are asked separately for males and females.

6.9 Core Respondent Disability and Functioning

CR Disability and Functioning

Introductory Statement

This section is for the **Young Cohort** only. If CR is part of the **Old Cohort**, skip to next section

This section should be conducted in complete privacy and should only be responded to by the **Adult Female Decisionmaker**.

This module asks about the health of the CR. It asks questions about the CR's level of functioning and any disabilities s/he may have.

Depending on the household type, there are two different disability questionnaires embedded in this section:

1. Physical Functioning, Non-Disability Sample
2. Physical Health, Disability Sample

If the household is in the **Disability Sample**, answer questions in **Physical Health**. Otherwise, ask only the questions under **Physical Functioning**.

CR Disability and Functioning, Physical Functioning

The response options for all questions except for 1 and 4 are:

- No Difficulty
- Some Difficulty
- A lot of Difficulty
- Cannot do at all

Q1-3. Q1 asks if the CR wears glasses or contact lenses. If so, Q2 asks if the CR has difficulty seeing when wearing his or her glasses or contact lenses. If not, Q3 asks if the CR has difficulty seeing.

Q4-6. Q4 asks if the CR uses a hearing aid. If so, Q5 asks if the CR has difficulty hearing when using the hearing aid. If not, Q6 asks if the CR has difficulty hearing.

Q7-10. These questions ask if the CR has difficulty with everyday activities. Q7 asks if the CR has difficulty walking or climbing steps, Q8 asks if the CR has difficulty remembering or concentrating on things, Q9 asks if the CR has difficulty with self-care such as washing or dressing, and Q10 asks if the CR has difficulty communicating.

CR Disability and Functioning, Physical Health

For the disability sample, the survey asks questions in all the same disability categories as in Q1-10, but in more detail. These CRs are known to have a disability of some type, and these questions are designed to gather more detail the degree of disability that the CR has.

The first set of questions, Q11-23, are about Physical Health. Question 24 is about self-care, questions 25-28 are about communication and comprehension, and questions 29-30 are about emotions, behavior, and relationships.

Again, for all of this section, except questions 11, 14, 29, and 30, the response options are:

- No Difficulty
- Some Difficulty
- A lot of Difficulty
- Cannot do at all

Q11-13. These questions exactly mirror Q1-3.

Q14-16. These questions exactly mirror Q4-6.

Q17. This question asks if the CR uses any equipment or receive help for walking. If Yes, skip to Q22. If no, continue to questions 18-21.

Q18-21. These questions ask about the degree of difficulty that the CR has walking a certain number of meters with and without support. Demonstrate length of a meter to the Adult Female prior to asking these questions. The length of a pace is a regular length step taken when walking normally.

Questions 18-19 ask if the CR has difficulty walking 100 meters (paces).

- Q18 asks if the CR can walk 100 meters (paces) with the use of assistance. If the CR **Cannot do at all**, skip to question 24. Otherwise, continue.
- Q19 asks if the CR can walk 100 meters (paces) *without* the use of assistance. If the CR **Cannot do at all**, skip to question 24. Otherwise, continue.

Questions 20-21 ask if the CR has difficulty walking 500 meters (paces).

- Q20 asks if the CR can walk 500 meters (paces) *without* the use of assistance.
- Q21 asks if the CR can walk 500 meters (paces) with the use of assistance.

After answering these questions, skip to Question 21.

Q22-23. Q22 asks if the CR has difficulty walking 100 meters (paces) on level ground in comparison with others of the same age. If the CR **cannot do at all**, skip to question 24. Otherwise, Q23 asks if the CR has difficulty walking 500 meters (paces) on level ground compared to children of the same age.

Q24. Asks if the CR has difficulty with self-care, such as feeding or dressing him/herself.

Q25-28. These questions ask about whether the CR has difficulty with communication and comprehension in comparison with children of the same age. These questions ask specifically about the CR's ability to understand other people, being understood by other people, learning new things, and remembering things.

Q29-33. These questions ask about the CR's emotions, behavior and relationships. Questions 29 and 30 have different response options than other questions in this section.

Q29 asks how often the CR worries or feels sad. The response options are:

- Not at all
- A little
- A lot
- Somewhere in between a little and a lot

Q30 asks how much difficulty the CR has controlling his or her behavior compared to children of the same age. The response options are

- None
- The same or less
- More
- A lot more

Q32 and 33 ask if the CR has difficulty changing his or her routine and if s/he has difficulty making friends.

6.10 Access to Productive Capital

Access to Productive Capital

Introductory Statement

This module should be administered in complete privacy. If the respondent to the AF survey is NOT an Adult Female Decision-maker for the Young Cohort, only a subset of questions will be asked.

This module has two parts:

1. Access to Productive Capital
2. Remittances

The first part is designed to gather information about the household's access to productive capital and how much of this capital the respondent has control over. The second part is designed to ask about whether the household receives any remittances.

Access to Productive Capital

If the respondent to the AF survey is NOT an Adult Female Decision-maker for the Young Cohort, only ask parts A-F (items 1-4) for questions 1 and 2, then skip to Q5.

Q 1. This question asks if anyone in the household currently owns any of the items. Ask question 1 for each item before moving onto question 2. The response options for this question are "yes" or "no". Parts (e)-(f) should only be asked of the **Adult Female Decision-maker for the Young Cohort**.

Just as for durable assets, it is important to **ask** the household about ownership of each item. Do not assume that the household owns the animal or item listed simply because this animal or item is in the household.

Moreover, it is important to distinguish between items that the household owns for private use and the items that are owned as business assets. For example, if a household owns a jewelry business, the jewelry that is sold at that store should not be counted as owned by the household in this section.

In the case of livestock, distinguishing between whether they are household owned or business owned can be more difficult. If the household owns some cows that are raised in the dwelling property and primary use of the cows is for selling milk, **DO** count these cows as owned by the household.

Likewise, if the household owns a dairy farm and has sole ownership of the cows, these would also be considered as household assets. On the contrary, if other people have ownership rights over the cows on the dairy farm, these cows **would not** be considered.

The key distinction here is that the household owns the livestock that it is using to sell goods on the market, whereas in the case of the jewelry, the jewelry business has ownership of the jewelry.

Q 2. For each of the items (c1) through (f) that the household reports owning in Q1, Q2 asks additional questions about the amount of land and number of livestock that the household has.

C1) Amount of Agricultural land

C2) Amount of Non-agricultural land

Question 2 asks for a measure of the amount of land that the household has. Use local units.

D) Large livestock

Question 2 asks the household to specify the total number of large livestock owned. The following large livestock are explicitly listed: Oxen, Other Cattle, Buffalo (except Ethiopia), Horse, Mule, Donkey, Camel (Ethiopia only). If there is another type of large livestock that the household owns that is not listed, select other and specify.

E) Small livestock

Question 2 asks the household to specify the total number of small livestock owned. The following small livestock are explicitly listed: goats, pigs (except Ethiopia), and sheep. If there is another type of small livestock that is not listed, select other and specify.

F) Poultry

Question 2 asks the household to specify the total number of poultry owned. The following poultry are explicitly listed: Chickens, Ducks (except Ethiopia), Pigeons (except Ethiopia), and Turkeys (except Nepal and Ethiopia). If there is another type of poultry that is not listed, select other and specify.

Q 3. This question is only asked of the **Adult Female Decision-maker for the Young Cohort**. It asks if the AF has sole or joint ownership over the piece of capital.

Sole ownership means that she has jurisdiction of the expenditure and use of the given asset or capital and would not need anyone's permission to sell the following items. Joint ownership means that she has a partner with whom she purchased the item and whose permission she would need to use or sell it, just as this partner would need her permission to do the same.

It is possible for the AF to both solely and jointly own an item. For example, if a household has 4 hectares of land, the AF may solely own one hectare and jointly (with someone else) own the other 3. This question allows you to select all that apply.

Q4. This question asks where the item is located (which country) and they can choose all that apply or add another option.

Remittances

Q5-7. These questions are asked to all respondent types to the AF survey.

This question asks if the household has received financial support from a family relation who spends most of their time outside of this village/neighborhood. This question is seeking to identify if the household receives remittances to supplement household earnings. Question 6 determines which country the individual providing support lives, and question 7 asks whether the household would be able to meet its needs without his or her support.

6.11 Financial Inclusion and Economic Empowerment

Financial Inclusion and Economic Empowerment

Introductory Statement

This section should be administered in complete privacy. If the respondent is NOT an Adult Female decision-maker for the Young Cohort CR, skip to the next section.

This module asks questions about:

1. Savings
2. Control over Money
3. Earnings

Savings

Q 1. This question asks if the respondent has an account at a bank or other financial institution where she can keep monetary savings.

Q2-4. These questions ask if the AF has saved in the last 12 months and what she has saved for.

Control Over Money

Q5-5a. These questions ask whether the AF has control over any money.

Q 6. This question asks whether the respondent has used a cell phone to send or receive funds within the last year, the 12 months. If the respondent is confused, provide common examples of how this might have been done (local apps or phone services that allow for paying bills or transferring money, etc.).

Q 7-8. These questions ask how possible it would be for the respondent to come up with [*a sizeable sum of money*] within 30 days of a sudden emergency and what the source of this money would be. The survey software will ask specifically about 1/20 of the GNI per capita in local currency. This value will differ by region.

Use the following category definitions when selecting how possible it would be for the AF to obtain these emergency funds:

- **Very Possible:** it would be extremely likely and easy to come up with this sum of money,
- **Somewhat Possible:** there would be a good chance of coming up with this sum of money
- **Not Very Possible:** it would be unlikely, but there is a small probability of coming up with this sum of money
- **Not At All Possible:** the AF would not be able to come up with this sum of money.

Earnings

Q9-11. This set of three questions asks the AF if she has received any money from salary or wage work, non-farm economic activities such as a small business, or from the sale of agricultural products.

Q13-13a. These questions are for camp study participants only. They ask about whether the AF or anyone else in the household has every applied for work permits and if they did, if they ever received permits to work in camp.

6.12. Paid Work

Introductory Statement

This section should be administered in complete privacy. The module asks about any paid work the respondent has done in the past 12 months. This may include work “in your own business, worked in someone else’s business, or done any other paid work to earn money.”

The module asks the respondent to focus on the work that she (or he) spent the most time doing in the past 12 months, collecting information on up to three jobs/activities.

Q1. This question asks if the respondent has done **any** work to earn money in the last 12 months. If the respondent has not done any paid work, skip to the next module.

If the respondent has done any paid work, proceed through the following questions. If the respondent has done more than one type of job or activity, complete 1 entry for each separate paid work activity or job, beginning with the activity the respondent spent the most time doing in the last 12 months. The survey allows for a maximum of three paid work activities.

Q2. This question asks the respondent to describe the type of work done.

Q3-4. These questions focus on the past **7 days**. Q3 asks about the number of hours spent doing this activity in the last 7 days. Q4 asks about the amount of pay earned for doing this work in the last 7 days (in JOD).

Q5-6a. These questions focus on the past **4 weeks**. Q5 asks about the number of days worked on this activity in the past 4 weeks. Q6 asks about the amount of pay earned for doing this work in the last 4 weeks (in JOD). Q6a asks about if the respondent got to keep all, some, or none of the payment earned for working in the last 4 weeks.

Q7. This question asks why the respondent did this work, with the answer options: 1) Need the money for the household; 2) Enjoy working; or 3) Other, specify.

Q8. This question asks the respondent if they completed any other paid work activities in the past 12 months. If the respondent says “Yes”, continue to through the questions again to gather information about this other activity. If the respondent says “No,” skip to the next section.

6.13 Refugee Status

Introductory Statement

This section should be administered in complete privacy. This section is only for refugees and migrants to Jordan to collect information about their experiences since arriving in Jordan. Skip this section if the AF or respondent’s home country is Jordan.

Q1-1a. This set of questions seeks to understand whether the respondent lived anywhere else after leaving their home country but before moving to Jordan.

Q2-3. These questions collect information about when the AF moved to Jordan and how long they have lived in their current village or community.

Q4-7. These questions ask about the AF respondent’s home country, including (as applicable), governorate (Q5), district or city (Q6), or neighbourhood (Q7).

Q8. This question asks about the respondent’s arrival in Jordan and who he or she arrived with (if anyone).

Q9-13. These questions ask about arriving in Jordan and whether the AF (and her family) ever lived in one of the official refugee camps. If the AF did not live in a camp on first arrival (Q9), skip to Q14.

Q14-15. These questions ask about experiences in Jordan after arriving. Q14 asks about which people helped the respondent to settle and feel comfortable after arriving in Jordan (for example, a landlord, neighbour (non-refugee), neighbour (refugee), relatives, friends, UN agencies, etc.). Q15 asks about how many times the AF has relocated since living in Jordan.

Q16-19. Skip these questions if the AF lives in camps. Q16 and Q17 ask the AF to rate how likely it is that she will return to her home country and where she expects to live in 5 years. Q18-19 ask about family in their country of origin and how often they communicate with them. These questions would be inappropriate for people living in camps and could instill a false sense of hope; therefore, they should only be asked to AFs living outside of refugee camps.

Q20-21. These questions ask about the respondent’s primarily daily activity prior to moving to Jordan (Q20), as well as the primary daily activity of the household head before moving to Jordan (Q21).

Q22-23. These questions ask the respondent about the income level of their household in their home country (before moving to Jordan) and currently in Jordan. The answer options for both questions are:

- Lower income

- Lower-middle income
- Middle income
- Upper-middle income
- Upper income
- Refused
- Don't know

6.14 Information and Communication Technologies

Information and Technology

Introductory Statement

This section should be administered in complete privacy. If the respondent is NOT an Adult Female decision-maker for a Young Cohort CR, skip to the next section.

This module is designed to gather information on what sorts of technologies the respondent uses and how often. There are questions to gather information on three topic areas:

1. Access to Information
2. Access to a Phone
3. Access to a computer and Internet Use

Access to Information

The following questions ask about how often the respondent uses various forms of media and technology. The questions should be read to ask about the respondent's use of each in the 30 days prior to the day of the interview.

The answer choices for these questions are

- never,
- hardly ever (anything less frequently than once per week),
- at least every week (up to a few times per week),
- daily or almost daily (most days with some exceptions),
- several times a day, and
- almost all the time (only reasonable for a form of communication technology that can run in the background, such as radio or television).

Q1-5. These questions inquire how often in the past month, the respondent has read a newspaper or magazine, listened to the radio, watched television, and used the phone to talk or text with people in Jordan and outside of Jordan.

Access to a Phone

Q6-6a. This question asks if the respondent has a phone for her own personal use, and, if so, whether it has access to internet.

Access to a Computer and Internet Use

Q7-7a. This question asks if the respondent has ever used a computer, laptop, or tablet. If so, Q7a asks how many times she has used one in the past 30 days. If not, skip to Q8.

Q8-8a. Similarly, Q8 asks if the AF has ever used the internet. If so, 8a asks how many often she has used internet in the past 30 days. If not, skip to the next question.

6.15 Health and Nutrition

AF's Health

Introductory Statement

This section is for the **Young Cohort** only. If CR is part of the **Old Cohort**, skip to next section.

This module should be administered in complete privacy. **It should only be administered to the Adult Female Decisionmaker for the Young Cohort.**

This section has four parts:

1. General Health and Physical Functioning
2. Access to Health Services
3. Mental Health
4. Food Insecurity

General Health and Physical Functioning

Q 1. This asks whether the respondent's general health status is, subjectively: "very good" (close to perfect), "good" (usually no complaints), "fair" (acceptable), "poor" (often bad), or "very poor" (almost always bad).

Q2. This question is about how much control the AF feels she has in her own life. The answer choices are from 1 (very little) to 10 (complete control).

Q 3. This question collects information on whether the AF requires anyone to provide her care due to ill health or disability. This captures the AF's physical functioning.

AF's Health, Access to Health Services

Q 4-12. These questions inquire as to whether the respondent has had any injuries or illnesses first in the last 4 weeks and then in the past 12 months. If the answer is yes, the follow-up questions ask if the AF has sought health care in the last 12 months and where they sought treatment.

Q 13a-d. This is a set of questions designed to understand barriers to access health services. For each item (a)-(d) the question asks if the circumstance is a "big problem" or "not a big problem" for accessing care. Only count a factor as a "big problem" if it substantially inhibits the respondent from accessing the services she needs, not if the factor is only minorly inconvenient.

Mental Health

These questions are asking how the respondent's feelings in the last two weeks (the 14 days prior to the interview date) compared to how she feels normally.

Q14-25. For these questions, read the response options aloud after each statement. Note that the answer options are slightly different for some of the statements.

For Q14, the answer options are:

- Better than usual
- Same as usual
- Less than usual
- Much less than usual

For Q15, 18, 19, 22, 23, and 24 the answer options are:

- Not at all
- No more than usual
- Rather more than usual
- Much more than usual

For Q16, 17, 20, 21, and 25 the answer options are:

- More so than usual
- Same as usual
- Less so than usual
- Much less than usual (Note: Q17 has the answer option "Much less capable" instead).

AF's Health, Food Insecurity

Q26-28. These three questions ask the respondent specific questions about food insecurity in the household in the last four weeks. If the respondent answers yes to the question, a sub-question (26a, 27a, and 28a) asks how often this happened in the past 4 weeks. If the answer is No, then it skips to the next question.

Q29. This set of questions (29a through 29h) ask about food insecurity in the last 12 months. For each question, the answer options are "Yes", "No", or "No response."

Q30-31. These questions ask if the household has cut back quantities served per meal to boys (Q32) and girls (Q33) in the household. If there are no boys under the age of 19 years old in the household, skip Q19. If there are no girls in the household under the age of 19, skip question 20.

6.16 Attitudes

Social Financial and Economic, Attitudes

This module should be administered in complete privacy. This module is designed to gain an understanding of the respondent's attitudes surrounding gender norms and roles in various aspects of life. In this part of the survey, there will be a set of statements related to gender norms in various dimensions of daily life. Ask the respondent if she agrees or disagrees with each statement. These

questions are asking the respondent how she believes the culture should work, not necessarily how it does work.

For each statement, ask the respondent to state the degree to which she agrees with the statement. The response options are “AGREE,” “PARTIALLY AGREE,” or “DO NOT AGREE.” It is important to emphasize that there are no right or wrong answers to this section. The goal of the section is simply to understand her opinion.

The questions ask the AF’s attitudes in 7 thematic areas:

1. Intimate Partner violence (Q1, 13)
2. Gender norms in household chores and decision-making, (Q2-5)
3. Economic empowerment (Q6, 11,12)
4. Women in leadership (Q7)
5. Schooling of girls vs. boys (Q8-10, 17)
6. Community trust (Q14-16)

6.17 Mobility, Voice, and Agency

Social, Financial, and Economic, Mobility Voice and Agency

Introductory Statement

This module should be administered in complete privacy. **It should only be administered to the Adult Female Decisionmaker for the Young Cohort.**

This module is designed to determine the level of freedom the respondent has to move about her community. It also attempts to learn about the respondent’s view of herself and her personal characteristics.

This section has two parts:

1. Mobility
2. Access to Public Transportation

Mobility

These questions ask about the degree of autonomy the AF has to visit the following places:

- a) A market/ shopping mall
- b) Religious Center
- c) A community center
- d) A public village gathering or community meeting
- e) ATMs (for refugees)
- f) Post offices (for Jordanians)
- g) Supermarkets where she can use WFP coupons (for refugees)

Q 1. This question asks how often the respondent goes to each of the listed places. Prompt for an answer of “every day,” “at least once a week” (between one and six times per week), “at least once every other week,” “at least once a month,” “less than once a month,” or “never.”

Q 2. This question asks if anyone in the household objects to the respondent traveling to any of these listed places alone. If she answers that no one in the household has a problem with her traveling alone to any of these places, skip to Q4. Otherwise, continue to question 3.

This question is asked *even if the respondent indicates that she never visits this location*. It could be the case that the respondent never visits the location because someone in the household objects to her going to the place. We want to know if this is the case.

Q 3. This question asks if this disapproval of her traveling alone prevents her from going to these places.

Access to public transportation

Q 4-5a. These questions ask about the availability of public transportation within walking distance to the AF's household and whether the AF uses it. If there is public transportation, but the AF does not use it, the final question asks for the reason that public transportation is not used.

6.18 Social Inclusion

Social, Financial and Economic, Social Inclusion

Introductory Statement

This module should be administered in complete privacy. **It should only be administered to the Adult Female Decisionmaker for the Young Cohort.**

This module is designed to discover how involved the respondent is in her community, in organizations, and whether she has a support system around her.

This section has three parts:

1. Participation in groups
2. Community Relationships
3. Social Cohesion

Participation in Groups

Q1-2 (a-d). These questions ask about participation and leadership in the following groups:

- a) Religious group
- b) Women's group
- c) CBO
- d) Other (specify)

If the AF respondent is not a member of the group, skip to question 3; otherwise, ask if she has a leadership role. Note that this does not necessarily mean that she is the primary leader, but could include a number of leadership roles within the group that includes some responsibility.

Community Relationships

Q3-5. These questions collect information on the AF's level of integration into the community through public action and personal relationships.

Q6-7. Q6 asks whether the AF has ever used a hotline (phone line) to talk to someone that they could trust. Q7 asks for the name of that hotline if they have used one and is skipped if Q6 is no.

Trust and Collective Action

Q8a-f. This series of questions ask the respondent to say how much she trusts specific groups of people including family, neighborhood, people that they know personally, people they meet for the first time, other religions, and other nationalities. The response options are from trust completely (1) to do not trust at all (4).

Q9. This question asks the respondent to name any group of people that she (or he) would **not** like to have as neighbours. Note that the response options listed **should not** be read aloud. Select all response options that apply, including "Other, specify."

Q10. This question asks the respondent to name any group of people that people who live in his or her community would **not** like to have as neighbours. Note that the response options listed **should not** be read aloud. Select all response options that apply, including "Other, specify."

Q11-11b. Q11 asks if the respondent is a part of a community initiative to support refugees. If Yes, Q11a asks why the respondent is part of this initiative. If No, Q11b asks why the respondent is not part of this type of initiative.

Q12-13. These questions ask about trust in organizations and information sources. The AF will answer Q12 about whether they would go to the five listed organizations (UN agencies, humanitarian agencies, police/military, religious institutions, and religious courts) if they had a problem and if they say yes, Q12a asks if they ever have gone to that organization when they had a problem. Q13 asks for the main source where they get their credible information.

Q14-14b. These questions ask about whether the AF has, in the last 12 months, talked with other people in your area about a serious problem (Q14a) and if she (or he) has taken action with others about a serious problem facing the community (Q14b).

Q15-16. These two questions ask about social cohesion and diversity in the community. First, Q15 asks how strong the feeling of togetherness or closeness is in the village/neighbourhood, with answer options 1) very distant; 2) somewhat distant; 3) neither distant nor close; 4) somewhat close; or 5) very close.

Then, Q16 asks about diversity in the community, defined as "differences in characteristics between people living in the same community. For example, differences in wealth, income, social status, ethnic background, race, caste, or tribe. There can also be differences in religious or political beliefs, or there can be differences due to age or sex." Answer options for this question include that this describes the community: 1) to a very great extent; 2) to a great extent; 3) neither great nor small extent; 4) to a small extent; or 5) to a very small extent.

Q17-18. This set of questions asks about if any groups of people in the community are excluded (prevented from or do not have access to) a specific program, including a) education/schools, b) health services/clinic, c) water, d) justice, and e) transportation. If the AF says “no” to Q17 for any of these groups, skip to the next group. If the AF says “yes” to Q17, continue to follow-up question Q18, which asks “How many are excluded” with the answer options: 1) only a few people; 2) many people, but less than half of the community; 3) many people, more than half of the community.

Community Consciousness

Q19-29. For this section, the AF is read a series of statements that may or may not be true about people in their community and whether they work together. The AF will answer whether she agrees, partially agrees, or disagrees with the statements.

6.19 Social Norms

Norms and Knowledge, Social Norms

This module should be administered in complete privacy. This module is designed to gain an understanding of the reality of gender roles in the community. Questions in this section cover 6 thematic areas:

1. Intimate Partner violence (Q6-7)
2. Children and the family reputation (Q8-9)
3. Gender norms in household chores and decision-making, (Q1-3)
4. Economic empowerment (Q10)
5. Schooling of girls vs. boys (Q4-5)
6. Community trust (Q11-12)

6.20 Trauma Symptoms

Introductory Statement

This module should be administered in complete privacy.

This module is designed to learn about the trauma symptoms that maybe present because of respondent’s past experiences. It asks about whether the respondent experiences symptoms such as nightmares, difficulty concentrating and sleeping, feeling detached from people, and general distrust in people. **This section may be sensitive for some respondents. Remind the respondent that she does not have to respond to any of the statements she does not want to or she can skip the entire section.**

Q1-18. These are a list of trauma symptoms that are read to the respondent. After each item on the list, read the response options 1) not at all; 2) a little; 3) quite a bit; and 4) extremely. All statements are read unless the respondent does not want to answer any more questions on trauma symptoms and then rest of the section can be skipped.

6.21 Violence

Violence

Introductory Statement

This module should be administered in complete privacy. **It should only be administered to the Adult Female Decisionmaker for the Young Cohort.**

This module is designed to learn about the safety in the community and whether the respondent has been able to speak about violence. **This section may be sensitive for some respondents. Remind the respondent that her answers are completely confidential and will not be shared or repeated to anyone.** It is of critical importance that the Violence section of this survey be conducted in complete privacy.

Violence, Safety

Q1 (a-l). This question asks whether the respondent feels safe in various locations including her home, friends and family's homes, and places in the community. For each location, the answer options are 1) yes or 2) no. Some locations may not be applicable to the respondent (ex: location e. is "At work", which should be marked "not applicable" if the AF does not work).

Q2-3. These questions ask a few additional questions about the AF's life. First, Q2 asks for the AF's age when she had her first child. If the AF reports not having any children, skip to Q3. If the AF reports having any children, continue to Q2a. Q2a asks about the total number of children the AF has had. Then, Q2b asks about the total number of living girl children the AF has. Then, Q2c asks about the total number of living boy children the AF has.

Q3 asks the respondent to confirm how many times she has been married, with answer options 1) once, 2) twice, 3) 3 times or more, and -77) never married.

6.22 Contact Information

Contact Info

Introductory Statement

This module is designed to collect information to make it possible to contact the respondent in the future.

There are 5 parts to this section:

1. Household Contact
2. Alternate Contact #1
3. Alternate Contact #2
4. CR Parent Contact Information
5. Self-Identification

Contact Info, Household Contact

Q 1-5. These questions identify the location of the household. If the household has a mailing address, record it in Q4a. In Q5, please provide detailed directions on how to locate the household. These instructions need to be clear enough that enumerators will be able to find this household again during subsequent visits.

Q 6-8. These questions ask for phone numbers by which the household could be reached at a future date. These numbers could be for a non-household member, as long as that individual could connect staff in the future to the household. Please attempt to obtain up to 3 possible phone numbers for the household.

Q9-13 . This set of questions collects information on a location that the AF respondent could be reached if s/he is not at home, such as work or school. Record the name of the place (10) and its location using the country, region, district codes for the appropriate country (10a-c). Finally, record the address of the location if it has one, a phone number, and detailed directions to reach the location. Again, the directions should be clear and detailed enough that someone else could locate the place without ever having been before.

Contact Info, Contact #1

The goal of this section is to collect contact information for a friend or family member that can help future enumerators and research staff find this household if it moves between this and the next survey. If the AF respondent does not agree to give contact information, skip to question 29.

Q14-17. Record the name of the contact, his or her relationship to the Core Respondent, and whether the contact lives in the household.

Q18-20. If the individual does not live in the household, record details of the location of the contact's household.

Q21. Collect information on a phone number by which this contact can be reached.

Contact Info, Contact #2

These questions exactly replicate questions 14-20 for a second contact that can be used to reach the household in case it relocates.

Contact Info, CR Parent Contact Information

If the contacts provided in the previous two sections are neither the mother nor the father and the CR's mother and father are alive, please record a contact number for the CR's mother (Q30) and father (Q31).

Contact Info, Self-Identification

Q32-35. These questions inquire about the AF respondent's and the Core Respondent's ethnicity and religious background.

Q36-38. These questions provide a few more ways of identifying this AF respondent in the future. They ask for the respondent's birth date, her biological father's full name, and her spouse's (or former spouse's) name if he is not listed on the roster.

6.23 Conclusion & Photo of ID

Photo of ID

If the AF has consented, take a photograph of the AF's ID card.

AF Conclusion

These final questions will conclude the interview.

Q 1-2. If the interview was ended prematurely, record the reason why. Either way, record the end time.

Q 3-4. Record the language of the interview and evaluate the respondent's proficiency at this language.

Q 5-6a. If there were other staff (Q5) or other individuals from the household or community (Q6) present during the interview other than the primary interviewer, record their identities.

Q 7-7a. This question evaluates the interviewer's confidence in the validity of the responses given: very confident, somewhat confident (but with some doubts), or not confident. If "not confident", record a reason why. For example, "she appeared to be rushing the interview process" or "she frequently misunderstood the questions". This is an open-ended question so be specific about your concerns.

Q 8-9. The final questions ask where the interview took place. Use a general description and record GPS coordinates.

7. Core Respondent Survey

The Core Respondent (CR) survey collects information only about the CR. There are sections of the survey that apply to all Core Respondents, as well as sections that are only appropriate for the **Young Cohort** or the **Old Cohort**. Both SurveyCTO and the paper copy of the survey will help you identify which sections and questions are appropriate to ask your CR. Unlike the AF survey, **the entire CR survey should be conducted in a private location, with only the enumerator and the CR.**

7.1 Core Respondent Survey Coversheet

CR Cover

The Core Respondent Coversheet performs three functions:

1. Collects information on the date and time of the interview and the name of the interviewer collecting the data;
2. Confirms the name of CR;
3. Records the identity and the outcome of the informed consent process for the Core Respondent

Q1-2. The first questions of the Core Respondent Survey Coversheet (CR Coversheet) collect information about the date and time of the interview. The date must be recorded using the local calendar.

The start time of the survey is recorded automatically in SurveyCTO by hitting the “Start Time” button. If a paper version of the survey is used, record the start time of the survey, using a 24-hour clock. For example, if it is 2:24, the interviewer would enter 14:24.

Q3. Fill in the correct identification information for the household including community id, household id and the CRs id from the household roster. Nothing has to be filled in SurveyCTO.

Q4-5. For these questions, the interviewer fills in the first and last name of the CR and then cross-checks with the tracking sheet to confirm that he/she is confident that he/she is speaking to the right person. In SurveyCTO the name is pre-populated, and once again the interviewer should verify that he/she is confident that he/she is speaking to the right person. If the pre-filled name is incorrect, then the interviewer fills in the correct name. This should happen only in the very rare case, and should prompt the interviewer to be extra cautious that this is in fact the correct individual.

Q6. The interviewer must confirm that a parent or guardian has consented to the CR being surveyed, and the CR has assented (or consented, if appropriate) to the survey. **If parent or guardian consent is not obtained, terminate the survey. If the CR does not assent/consent, terminate the survey.**

Q7-11. Confirm the CR’s demographic information, including gender and age in Q7 and Q8. Identify whether the CR is part of the disability sample for Q9 (this will be programmed in SurveyCTO). Confirm the location of the interview (Camp, Host, or ITS) in Q10. Finally, confirm the CR’s nationality in Q11.

7.2 Education

CR Education

Introductory Statement

The Education module should be completed in privacy. It is designed to gather information about the Core Respondent's educational background, beliefs, and habits. It should be administered to both the **Young Cohort** and the **Old Cohort CRs**.

This section has five parts:

1. Ever attended school
2. Attended School
3. Current Enrollment
4. Education History
5. Different Opinions about School

Ever Attended School

Q 1. The first question confirms whether school is currently in session in Jordan at the time of the current survey. In other words, the question asks, is the interview taking place during the school term? Note that this question can be answered by the enumerator without asking for any additional information from the Core Respondent.

Q 2-2a. The next question determines whether all of the following questions about education will be asked. If the CR responds by saying no, the interviewer should make sure that this is the correct response. It is OK to ask probing questions like "Are you sure? Not even preschool, kindergarten, religious school, or any vocational training?". If the response is still "no," continue to Q2a to learn why the CR has never attended school.

CR Education, Attended School

Q 3. This question asks about whether the respondent attended the earliest level of education.

Q 4. Record the age at which the CR first attended Grade 1.

Q 5. Record whether the CR is currently enrolled. Probe if the CR says that they are not currently enrolled. If the CR says "yes," the survey will skip to Q6.

Q 5a-g. These questions are for respondents not currently enrolled in school, but who have attended some level of school. Questions 5a-d assess when he/she was last in school by asking what the CR's age of last attendance, the highest level of schooling attended before the CR stopped going to school, the number of years the CR spent studying at that level, and the CR's highest qualification, certification, or degree. Question 5e ask why the CR stopped attending school.

Q5f-g. are for understanding the respondent's school ranking. If the respondent refused, doesn't know or does not have an applicable response for the number of students in his/her class, continue to Q23 if the highest level of schooling attended is less than grade 12.

CR Education, Current Enrollment

Q 6a-e. This series of questions asks the CR for his or her current level of schooling, how long the CR has been studying at this level, the CR's specialization, and the CR's rank in his or her class. These questions mirror parts of Q5 for CRs who not currently enrolled in the section **Attended School**.

Q 7,7a-d. These questions identify the school that the CR attends and what shift the CR attends if it is a dual shift school.

Q 7e. This question collects information on the toilet facilities at the school and whether the school has separate facilities for girls.

Q 8,8a-b. These questions ask how the CR gets to school, how long it takes in minutes, and whether she feels safe while traveling to school.

If the CR is unsure of how long it takes for him or her to get school, prompt with additional questions to help him/her arrive at a numeric answer if possible. For example, ask "What time do you usually leave to go to school? What time do you arrive? Do you make it to school early, right on time, or late?"

Q 9-14a. These questions ask whether the respondent feels safe at school and whether s/he has ever been the subject of or the witness to corporal punishment by teachers at the school. Q14 and 14a ask the CR if they have ever told anyone and who if they saw a teacher being violent towards themselves or other students.

Q15. This inquires whether the respondent feels comfortable expressing his/her thoughts and opinions in class.

Q16. This question asks if the respondent holds a leadership role at school.

Q17-20. These questions are about the availability and use of school counselors by the CR. If the CR has never visited a counselor (Q19) continue to Q22.

Q21, 21a-d. These questions ask how many days the respondent has missed school in the last two weeks that school was in session, whether the respondent has missed more than 1 week of school at a time in the last 12 months, and the respondent's reason for missing school.

In these questions, exam periods should not be considered as school being in session.

Q22, 22a-d. These questions ask about non-formal education for CRs that are not currently attending school. These are education programs in Jordan for children that are not attending formal school. A number of these courses are sponsored by the Ministry of Education and offer a certificate or a pathway back into formal schooling. They are mostly targeted towards children that are out of school for various reasons including migration.

Q23, 23a-b. These questions are about informal education classes which are not sponsored by the Ministry of Education but provide educational opportunities for children that are not able to attend formal school.

CR Education, Education History

Q24-29. These questions probe the respondent for information about any periods of time where she/he was out of formal school for three months or longer. These out-of-school periods should **not** include school holidays or national holidays.

Starting with the most recent time the Core Respondent was out of school for three months or longer, we ask the following questions for each distinct time the respondent was out of school:

- How old were you were out of formal school for 3 months or more? (Age in years)
- How many months were you out of school?
- What level did you attend when you stopped attending formal school?
- What level did you attend when you started attending formal school again?
- What was the main reason you missed school during this period?

If the respondent has a hard time remembering information in prior years, try to probe them by helping them to think about how old they were and what grade they would have been in when the school interruption occurred. IF they can't remember, record DK and move to the next question.

CR Education, Different Opinions

Q30. This question asks the respondent to use his or her imagination and think about how long he or she would like to study if there were no constraints in her life such as lack of money, lack of transportation, lack of time, etc.

Q31-41. These questions inquire about the respondent's perception of gender roles related to schooling. Some of the questions ask what the respondent believes is normal according to others in their community, related to how girls and boy interact in school settings. Other questions ask about the respondent's own opinions on how boys and girls should ideally be treated.

We are interested in learning whether the CR agrees or disagrees with several statements. This will be an "active activity" where the CR will respond to these statements by holding up a card that expresses how he/she feels. There are three cards: one GREEN, one YELLOW, and one RED.

- If the respondent agrees with the statement, he or she will point to the GREEN card.
- If the respondent partially agrees with the statement, he/she will point to the YELLOW card.
- If the respondent disagrees with the statement, he/she will point to the RED card.

Let the CR practice this new activity by making a statement and having him/her respond. For example, "You are wearing a red shirt". Ensure that the Core Respondent understands how to answer with the cards before continuing to the questions.

Throughout the activity, remind the respondent of the response options to the cards. It is important to emphasize that there are no right or wrong answers to this section. Read each statement exactly as it is written. Record 1 for agree (green), 2 for partially agree (orange), or 3 for disagree (red).

Note that some of the questions are only asked to the Older Cohort (age 15 or older), including Q31, 35, 37, 39, and 41.

7.3 Time Allocation

CR Time and Work

Introductory Statement

The time allocation section should be completed in privacy. It is designed to gather information about how the Core Respondent spends his/her time on a typical day. Note that if the Core Respondent is in school, then this section is asking about a typical **school** day. It will also examine the Core Respondent's opinions on the way various domestic duties and social roles are allocated between the genders.

Remember that this section seeks to learn about how the core respondent spends his/her time on a *typical* day, so should not include holidays in the reference period. If the previous day was a holiday, ask the respondent to use the most recent non-holiday day as the reference period.

This section has three parts:

1. Time Allocation (Young Cohort)
2. Statements
3. Time Allocation (Old Cohort)

CR Time and Work, Time Allocation (Young Cohort)

Q 1-13. This will be another interactive portion of the survey. Start by giving the Core Respondent 24 beans and laying out 13 time cards. The 24 beans correspond to the 24 hours in a day and the 13 cards illustrate the time use categories in Q1-Q13. Give the respondent 24 beans and lay out the card illustrating the time use categories. Ask the respondent to distribute the beans according to the amount of hours spent on each activity, as you go through the list. Ask the respondent to round to the nearest hour (so that <30 minutes rounds down, and ≥30 minutes rounds up). If the respondent was performing multiple activities at the same time, ask them for the main activity they were performing. If the respondent is Muslim and says he or she prayed 5 times a day for 5 minutes, please round this up to an hour even though it is only 25 minutes.

After reading the explanation of the upcoming activity, feel free to walk the Core Respondent through an example of this exercise. For example, "So if you normally sleep for six hours on a school day, you would place six beans here on the card with the picture of the person sleeping". Ensure that the Core Respondent understands the activity before continuing.

Make sure all beans are allotted before filling in the responses to this table. Record the time allocation in SurveyCTO, ensuring that the total number of hours is 24.

Q 14. Record how many hours are used for caring for others.

CR Time and Work, Statements

Q 15-22. These questions inquire about whether the CR agrees or disagrees with several statements about the way various domestic duties and social roles are (and should be) allocated between the genders. See the Education Section (Opinions about Schooling) for instructions for this activity.

CR Time and Work, Time Allocation (Old Cohort)

Introductory Statement

This module is designed to gather information about how the CR spends her time on a typical day. There are two parts:

1. Complete accounting of the previous day
2. Benchmarking the past day to normal

Complete Accounting of the previous day

This section seeks to learn about how the CR spent her time in the past 24 hours.

Q1-2. Read aloud each 30-minute time period and ask the Adult Female what activity she did at this time.

If the CR did more than one activity, ask for the main activity. The main activity is either the focal activity or the activity that the CR is doing the majority of the time. The majority of the time means that the CR spent at least 15 minutes or more focused on this activity. If the CR is performing two activities at once, determine which activity was the focal activity. For example, if the CR is cooking and she is also cleaning the dishes in between steps of the recipe, log this as Cooking. Here, Cooking is the focal activity.

If the CR responds “caring for children” (activity code=12), skip to the next time period. If the CR does not respond “caring for children,” proceed to Question 2. Ask the respondent if she also cared for children during the time period. If yes, check the box for the appropriate time period. If no, leave the box blank.

If the respondent says that he/she was relaxing and not doing anything else (e.g., not watching TV, not socializing with family, etc.), then use the code for “Sleep/Rest.”

All activities listed by the respondent should fit into one of the activity codes. Even if the description by the AF does not exactly match the codes provided, the activity may still fit under that category. Below are some examples of activities and where the items should be coded.

1. **Talking to [family member]:** 18 = Social Activities and Hobbies
2. **Preparing food:** 11 = Cooking
3. **Buying goods and services:** 9 = Shopping/ getting service
4. **Private tuition/tutoring or training program:** 5 = Studying/Homework outside of school/training program

Note that time spent travelling to any activity except school or religious services should be codes as **15 = Travelling/Commuting (except to own school or religious activity).**

In addition, it may be necessary to distinguish the purpose of specific activities in order to determine which category to select. For example, if the respondent indicates that s/he went to a club or group meeting to learn to sew, the enumerator should determine whether the primary purpose of attending this club was to learn a new skill to use as a livelihood, or if the primary purpose is to socialize with peers while learning a new skill. If the respondent went to the club to learn a skill to

use for livelihoods, then this would be code **5 = Studying/Homework outside of school/Training program**. However, if the respondent went to the club to socialize with friends, then this would be code **18 = Social Activities and Hobbies**

It is the enumerator's job to know the activity codes well. **The codes should not be read aloud to the respondent.** Rather, the respondent will describe their activities during the specified time period, and the enumerator will match those activities to the activity codes in the survey *in the background*. The CR need not be aware that the activities correspond to specific activity codes.

Benchmarking the past day to normal

Q3-4. These questions ask about whether the CR has spent: more than usual, less than usual, or the same as usual time working inside or outside the home in the last 24 hours. The purpose of these questions is to flag if there was anything unusual about the previous 24 hours, such as it being a holiday.

If the CR never works outside of the home, it is still possible to answer Q4. In this case, "About the Same as Usual" would mean that the CR never works outside the home, and did not work outside the home in the past 24 hours.

Q5. This question asks, overall, whether yesterday was a typical day for the CR. Answer options are: 1) Yes, typical weekday, 2) Yes, typical weekend day, 3) Not typical, holiday, or 4) Not typical, other (specify). If "Not typical, other" is selected, please record why the day was not typical.

Q6-8. Q6 confirms if there are any children under the age of 5 in the household. If no, skip to the next section. Q7 and 8 should only be asked if there are any children under age 5 in the household.

Q7 asks if anyone is available to care for the household's children under age 5. If not, continue to the next section. If the respondent answers yes to Q7, Q8 asks who is available to care for children under age 5. After each response, prompt if anyone else is available to care for the children. Record up to three responses. Record "94" for a non-household member.

7.4 Paid Work

CR Time and Work, Paid Work

Introductory Statement

The Paid Work section should be completed in privacy. It is designed to learn about activities the Core Respondent does to earn money either for him/herself or the family. This is about paid work only, not work done on the family farm.

Paid Work

Q1. Ask if the Core Respondent has done anything to earn money or items for him/herself or the family in the last year. Specify that this means 12 months prior to the date of this survey. If the CR seems unsure, probe with questions breaking this time period down into smaller time periods. For example, "Did you have a job or help your mom with her job last summer?" Or, "During the crop season, did you help farm or do anything to help make your family or yourself money?"

If not, skip to Q10.

Q2. Record up to eight different types of activities that the respondent has done to earn things or money over the last year. The “last year” refers to the 12 months prior to the date of the interview. In SurveyCTO, a new row should be added for each activity. Once the activity is added, include the appropriate details for the activity (outlined below), before adding an additional activity.

Activity Details

Q3-4. These questions ask about the total number of hours worked and total amount earned during the ***seven days prior to the interview***. If the CR is paid monthly, convert his or her monthly wage to a weekly value and record this number.

Q5-6. This question asks how many days were used to complete the paid work and the total amount earned, during the ***four weeks prior to the interview***.

Q7. If the CR earned payment for the work in the last four weeks, this question asks if they have to share it, or if they are able to keep all or some of the earnings for themselves.

Q8. The final question in this section prompts for any additional activities. If there are more activities that are being done for paid work, close the question box in SurveyCTO and then add another row for the next activity. Repeat all the questions in the section again.

Q9-10. These questions ask about the types of jobs available for adolescents in the CR’s community, first for adolescent girls (Q9), and then for adolescent boys (Q10). Note that the responses should not be read out loud. Instead, ask the CR to list any jobs they can think of in their community for adolescent girls (Q9) or adolescent boys (Q10). After each response, prompt, “Any others?”, until the CR is finished listing responses.

7.5 Health and Nutrition

CR Health and Nutrition

Introductory Statement

The Health and Nutrition section should be completed in privacy. It is designed to ask the Core Respondent questions about his/her perceived level of health and recent health symptoms. It also enquires into food insecurity that the household might have experienced and ways in which that affects the Core Respondent. Lastly, this section takes height and weight measurements of the Core Respondent. In this section, there are differences between the questions and sections that you will ask the **Young Cohort** and the **Old Cohort**.

This section has six parts:

1. General Health
2. Physical Functioning, Non-Disability Sample
3. Physical Health, Disability Sample
4. Health Symptoms and Injuries
5. Access to Health Services
6. Meals

General Health

Q1. This question asks about how good the Core Respondent's health is, subjectively: "very good" (close to perfect), "good" (usually no complaints), "fair" (acceptable), "poor" (often bad), or "very poor" (almost always bad).

Q2. This question is about how much control the CR feels he/she has in her own life. The answer choices are from 1 (very little) to 10 (complete control).

- If the CR is part of the **Young Cohort** (aged <13), then skip to Q36 (Illness and Injuries)
- If the CR is part of the **Old Cohort** (aged ≥13) **AND** part of the **Disability Sample**, then skip to Q13
- If the CR is a part of the **Old Cohort** (aged ≥13), continue to the next question

CR Health and Nutrition, Physical Functioning

These questions exactly replicate the questions on Physical functioning in the AF Survey for the Young Cohort CR. Please refer to **Section 6.9 Core Respondent Disability and Functioning, Physical Functioning** for additional instruction.

CR Health and Nutrition, Physical Health

These questions exactly replicate the questions on Physical Health in the AF Survey for the Young Cohort CR. Please Refer to **Section 6.9 Core Respondent Disability and Functioning, Physical Health** for additional instruction.

CR Health and Nutrition, Health Symptoms and Injuries

Q36-36a . Read the list of illness symptoms and ask if the respondent has experienced any of these in the last month. Record "yes," "no," or "DK" if the respondent does not know what the symptom is. If he/she says "yes" to any of the symptoms, continue and ask if he/she has sought treatment for any of the symptoms this month. A few helpful descriptions of the symptoms include:

1. **Fever** – when the body feels hot.
2. **Persistent headaches/ cough** – these are regular/frequent coughing episodes or headaches that occur over the past two weeks
3. **Runny nose** – when mucus comes from the nose.
4. **Constipation** – inability to defecate regularly
5. **Convulsions/seizures** – when the whole body shakes uncontrollably.

Q37-37b. These questions inquire whether the Core Respondent has had any injuries in the last four weeks. If yes, Q37a asks about what those injuries were, and Q37b asks if the CR sought treatment for those injuries in the last four weeks. Again, clarify that we are only asking about injuries in the four weeks prior to the survey date.

Q38-38a. These questions inquire whether the CR has had any serious illnesses, health conditions, or injuries and sought treatment for those illnesses in the last year. Clarify that we are only asking about injuries in the 12 months prior to the survey date. It is OK to break this time period down and ask this question of smaller sections of time if this makes it easier for the respondent to think. If the CR says "yes", please specify the type of serious illness, health condition, or injury.

Q39. If the CR sought treatment, as recorded in Q36a, 37b, or 38a, continue to Q39 to find out where the treatment was sought. Note that this question allows multiple answer options (select all that apply).

CR Health and Nutrition, Access to Health Services

Q40a-c. These questions should be asked only if the CR is a part of the **Old Cohort**. Refer to the instructions for the **Access to Health Services** questions in **Section 6.15 Health and Nutrition** in the AF Survey.

CR Health and Nutrition, Meals

Q41. This question asks about whether the Core Respondent or his/her family have dealt with food insecurity or hunger over the four weeks prior to the interview.

Q42-43. These three questions ask for more detail about the meals that the CR had yesterday. A meal can be considered food prepared at school or at home/family member's home. If the CR did not have any meals yesterday, skip question 42a and continue to ask about snacks in Q43. Snacks are considered as pre-made foods may be obtained by a street vendor or store/shop.

Q44. This question asks what the CR slept on last night, with answer options: 1) Floor, 2) Mat/rug on the floor, 3) Mattress on the floor, 4) Bed or sofa, or 5) Other, specify.

7.6 Psychosocial and Mental Health

Introductory Statement

The Psychosocial and Mental Health section should be completed in privacy. This module aims to understand how the respondents feel about themselves. Please be aware that this section may be difficult for some adolescents to respond to, since the questions ask them to share personal information. This module has two parts:

1. Mental Health
2. Resilience and Coping

Mental Health

Q1-12. These questions ask about the respondent's moods and emotions over the past two weeks in comparison with how he/she normally feels. Please refer to **Section 6.15 Health and Nutrition – Mental Health** for additional instructions.

Resilience and Coping

Q1-28. This section includes a series of statements that are read to the CR. The respondent will answer whether they think that the statement describes themselves. The answer choices range from not at all (1) to quite a bit/a lot (3). The last question in this series, Q28 asks whether the CR is proud to be [nationality of child]. For instance, if they were originally from Syria, you would say "Syrian" but if they were born and raised in Jordan, you would say "Jordanian."

7.7 Mobility, Voice, and Agency

Introductory Statement

The Mobility, Voice and Agency section should be completed in privacy. The purpose of this section is to understand how and how often the respondent is able to move about, how comfortable they are with expressing their opinions and how much those opinions matter to their family and community.

This section has four parts:

1. Places CR May Visit
2. Voice
3. Migration attitudes
4. Personality & Self Efficacy

Mobility, Voice and Agency, Places CR May Visit

Q1-2. These questions ask how many times in the past 3 months has the CR travelled outside of their home and then their community. If the interview is done in August, the interviewer should count backwards from the day of the interview. This means that three months prior would be sometime in June.

Q3-6a. These questions are similar to those in **Section 6.17 Mobility Voice and Agency – Mobility** in the AF Survey. Record how often the CR visits:

- a) The local market
- b) The market and shopping malls (for host community only)
- c) The home of a relative, friend, or neighbor
- d) Religious Institution
- e) Koranic classes
- f) Cafes (host community only/older cohort only)
- g) Playgrounds or sports fields
- h) Makanis
- i) A place in the community where you feel comfortable seeing friends

Record how often the CR went to each place in the last 3 months (Q3) whether the CR would need permission to go to each place (Q4), who the CR would need permission from (Q4a), whether the CR can travel alone (Q5), and who would typically travel with the CR (Q5a). Ask these questions even if the CR never goes to the location. It could be the case that the CR never visits a place because they are not allowed to or they are not allowed to travel alone. We want to capture this.

Q6-6a. Record whether there are any rules or restrictions on clothing that affects whether they are able to visit the location for each place on the list.

Mobility, Voice and Agency, Voice

Q7-10. These questions ask about the CR's level of comfort with expressing their opinions.

Q 11a-h. These questions ask the CR if their opinions matter, when making decisions in their home. Please try to encourage the respondent to use the exact same wording that was suggested for the answer choices, so that their responses are not accidentally misinterpreted and/or coded incorrectly. The response options are:

- Not at all
- Not much
- A little bit
- A great deal

Q 12-26. These questions seek to understand their personality traits. Read each statement exactly as it is written and the response options aloud after every statement. The response options are:

- Disagree strongly
- Disagree a little
- Neutral / No Opinion
- Agree a little
- Agree Strongly

To help the CR select the response options, utilize the Red, Yellow, and Green cards. Ask the CR to point to the Red card if the CR disagrees with the statement, to point to the Yellow card if the CR feels neutral about the statement, and point to the Green card if the CR agrees with the statement. After the CR points to the color that corresponds to his or her feeling about the statement, as whether she or he feels “Strongly” or “A little.” Select the corresponding response. See **Section 7.2 Education – Different Opinions** for additional activity instructions.

Mobility, Voice and Agency, Migration Attitudes

These questions should only be asked if the CR is a part of is in the **Old Cohort**.

Q27. This question asks where girls are likely to be more successful, in Jordan or their home country. This question is skipped if the CR is Jordanian

Q28-30. These questions ask if the CR envies people who have the chance to move to different location outside of Jordan.

Mobility, Voice and Agency, Self-Efficacy

These questions should only be asked if the CR is a part of is in the **Old Cohort**.

Q31-40. These questions are interested in learning how confident the CR is in his/her ability to address the problems that they might face in their lives. Read aloud the responses and encourage the CR to use the same exact wording that is given for the answer choose, to avoid misinterpretation of the response. The responses are:

- Not at all true
- Hardly true
- Moderately true
- Exactly true

7.8 Makani

This section is collects information on prior participation and experiences in the Makani program. It should be asked to all respondents whether or not they are being interviewed as part of the Makani sample.

Q1. The first question asks if the CR has ever attended a Makani class. If no, record the reason why in Q1a, then proceed to the next section. If yes, skip to Q2.

Q2-2a. These questions ask about the year the CR first started attending Makani his or her age at that time.

Q3-3c. These questions ask if the CR is currently attending Makani. If “Yes,” skip to Q4. If no, continue to Q3a, which asks what year the CR last participated in Makani. Then, Q3b asks his or her age at that time. Finally, Q3c asks the main reason the CR stopped attending Makani.

Q4. This question asks the CR for the type of classes they have attended at the Makani center. Read the list of options and mark all that apply. These are broad categories of classes and so if the respondent does not know which category one of their specific classes fits in, asks them to explain what they did/do in the class and decide which category the class fits in. The options are:

Psychosocial Support (PSS): These are activities that are intended to counter the psychosocial distress experienced by children due to displacement, economic hardship, violence and other causes; and to help restore a sense of normalcy.

Life Skills (LS): The LS / "adolescents and youth empowerment" component aims at *"enhancing youth empowerment; enabling youth to use their voices, participate more actively in their communities, and make positive choices in their lives."* (UNICEF JCO, 2016m). LS training encourages personal development, promotes engagement with society, and provides valuable employability skills and more.

Informal education: Educational activities that range from recreational activities to literacy numeracy, and life skills sessions⁹. These educational activities are not certifiable by the Ministry of Education and not specifically bound to certain age or target group. The main categories are:

- a) Basic learning;
- b) Technical skills/Post Basic education, and;
- c) Recreational activities;
- d) Remedial education.

WASH: In ITs, the WASH component helps ensure that beneficiaries have access to clean water and sanitation facilities, and also teaches/encourages hygiene practices.

Innovation Lab: This programming is for older adolescents (14-18 years old). Youth lead the design and implementation of their own innovations.

Q5-8a. These questions ask about the CR's experiences at Makani. First, Q5 asks what the CR likes best about attending Makani (focusing on the main response the CR identifies). Then, Q6 asks what the CR does **not** like about attending Makani (focusing on the main response the CR identifies).

Q7 is asked the any CRs living outside of camp settings. This question asks if the CR interacts with kids of other nationalities (i.e., nationalities different than his or her own) at Makani.

Q8 asks if the CR discusses what she or he has learned at Makani with others. If yes, Q8a asks the CR to select up to three people that the CR discusses with, prompting “Anyone else?” after each response up to three.

7.9 Social Inclusion

CR Other Modules, Social Inclusion

Introductory Statement

The Social Inclusion section should be completed in privacy. In this section, we seek to learn about the respondent’s relationship with groups, family members, friends, mentors and community members.

This section has six parts:

1. Member of Groups
2. Has CR Ever Talked About
3. Role Models
4. Trust and Collective Action
5. Social Cohesion
6. Risky Behavior

Social Inclusion, Member of Groups

Q1. This question is asking if the CR participates in a physical sport. If the respondent has questions about what a physical sport is, the interviewer can explain that a physical sport is any sport (organized team or group of casual friends) that may involve competitively interacting. A physical sport also encourages the competitive use of strength or talent, through arms, legs, hands, etc. Examples of physical sports may be futbol, running, or cricket. The interviewer may also share other examples of physical sports, if they are asked.

Q2-9. These questions ask the CR about various groups and clubs of which the CR may be a member. First, for Q2, ask the CR “Are you a member of” and then substitute “group” with the group name in the second column. The groups include:

- Summer activities/trips (including academic, sports, and/or arts & crafts)
- Religious summer activities (including Koranic competitions, trips to mosques, other places)
- Koranic classes
- JOHUD/Amira Bassma Centre (only asked to those outside of camps)
- Another group (e.g., life skills, skills building, IT, crafts, English language, etc.), specify

For each group the CR is a member of, proceed through Q3-9. Q3 asks if the CR is currently a member of that group. Q4 asks the month and year the CR last participated in the group (if not currently a member). Q5 asks about how often the CR participates (or participated) in the group, with answer options: 1) everyday, 2) every week, 3) every two weeks, 4) every month, 5) less than once a month, or 6) never. Q6 asks if the group/program is provided through school (yes or no).

Q7 asks about how much the CR's participation in the group matters to her or him. If the CR responds that the group matters "a great deal" or "a little bit", proceed to Q8, which asks why the group matters to the CR. If the CR says the group does not matter much, skip to Q9. Q9 asks what the CR likes most about this group.

Q10-11. This question asks if the CR has friends, who are not members of their family, that they trust, and with whom they can talk about feelings and personal matters? If the respondent gives an open-ended answer, encourage them to say yes or no. For example, "I have one friend at school that I sometimes talk to about foods but I can't always talk to them about some things. The interviewer may respond by saying, "So would you say that you can trust them?", in order to get a yes or no response. If they are unsure, use code -99.

If the CR responds that he or she has trusted friends, proceed to Q11, which asks for the gender of these friends (male, female, or both male and female).

Social Inclusion, Has CR Ever Talked About

Q12-13. The questions ask if the CR is comfortable discussing various topics with either their male or female guardian. The questions when to get married, should only be asked if the CR is a female.

Social Inclusion, Role Models

Q14a-f. In these questions, we are interested in learning who the CR considers a role model. If the respondent does not have a person that they respect, follow, look up to or want to be like, the interviewer should skip questions 14a-14f and proceed to question 15. If the CR names a role model that is a person in their household like mother or father, continue with 14d-14f, otherwise continue to 15 after 14c.

Social Inclusion, Trust and Collective Action

Q15-16. These two questions ask about social cohesion and diversity in the community. First, Q15 asks how strong the feeling of togetherness or closeness is in the village/neighbourhood, with answer options 1) very distant; 2) somewhat distant; 3) neither distant nor close; 4) somewhat close; or 5) very close.

Then, Q16 asks about diversity in the community, defined as "differences in characteristics between people living in the same community. For example, differences in wealth, income, social status, ethnic background, race, caste, or tribe. There can also be differences in religious or political beliefs, or there can be differences due to age or sex." Answer options for this question include that this describes the community: 1) to a very great extent; 2) to a great extent; 3) neither great nor small extent; 4) to a small extent; or 5) to a very small extent.

After these questions, if the CR is in a **Young Cohort** sample HH, skip to the next section.

Q17 a-d. These questions are interested in learning about how the respondent feels about the community. Question 17a is specifically asking whether the CR thinks that most people who live in their village/neighborhood can be trusted. If the CR has questions about trust, the interviewer should explain that trust could mean that people in the village/neighborhood are dependable, reliable or can keep a secret. Question 17b is similar. The question asks if the CR thinks that people in their village/neighborhood are willing to help if the CR needs it. If the CR has questions about this

question, the interviewer should give examples of times when someone may need help. For example, someone may need help lifting a heavy basket, caring for a small bruise or asking for directions to a house. The interviewer should explain that there are several times when or examples of needing help. They should not be limited by the examples that were shared.

The remaining questions in this section are the same as Social Inclusion section in the AF Module. Please refer to Section 6.18 for more details about these questions.

Q18a-f. This series of questions ask the respondent to say how much she trusts specific groups of people including family, neighborhood, people that they know personally, people they meet for the first time, other religions, and other nationalities. The response options are from trust completely (1) to do not trust at all (4).

Q19. This question asks the respondent to name any group of people that she (or he) would **not** like to have as neighbours. Note that the response options listed **should not** be read aloud. Select all response options that apply, including “Other, specify.”

Q20. This question asks the respondent to name any group of people that people who live in his or her community would **not** like to have as neighbours. Note that the response options listed **should not** be read aloud. Select all response options that apply, including “Other, specify.”

Q21-22. These questions ask about trust in organizations and information sources. The CR will answer Q21 about whether they would go to the five listed organizations (UN agencies, humanitarian agencies, police/military, religious institutions, and religious courts) if they had a problem and if they say yes, Q21a asks if they ever have gone to that organization when they had a problem. Q22 asks for the main source where they get their credible information.

Q23a-23b. These questions ask about whether the CR has, in the last 12 months, talked with other people in your area about a serious problem (Q23a) and if she or he has taken action with others about a serious problem facing the community (Q23b).

Social Inclusion, Risky Behaviors

These questions should only be asked if the CR is a part of is in the **Old Cohort**. These questions ask about smoking behavior (cigarettes and shisha) and attitudes on alcohol use.

Q24-24c. These questions ask if the CR has ever smoked cigarettes. If yes, the survey asks follow-up questions about current smoking habits and the age at which the CR started smoking cigarettes. Then, the survey asks all CRs—whether they have ever smoked cigarettes or not—if she or he has any close friends who smoke cigarettes.

Q25-25c. This series of questions is the same as the above, but asking about smoking a shisha pipe.

Q26-30. These questions ask about the CR’s attitudes about alcohol use. First, Q26 asks about if the CR feels pressure from her or his friends to drink alcohol. Then, Q27 asks if the CR thinks there is peer pressure to drink alcohol for male youth in general. Then, Q28 asks if the CR thinks there is peer pressure to drink alcohol for female youth in general. Q29 asks about the CR’s personal influences on his or her own decisions about drinking. For this question, please record the biggest influence, then the second biggest influence. Finally, Q30 asks the CR to estimate what percentage of teens in her own community she thinks drink alcohol.

7.10 Educational Testing 1

CR Other Modules, Educational Testing

Introductory Statement

The Educational Testing section should be completed in privacy. This first testing section administers the **ASER Math and Reading tests**.

The Annual Status of Education Report (ASER), is a survey originally developed to test of reading and math achievement of children from rural India. ASER provides a basic test to understand children's foundational reading skills (letter identification, word decoding, etc.) and basic math ability (number recognition, subtraction, and division). The tests are orally and individually administered and require about 10 minutes of administration time.

ASER Math and Reading tests

For this test, the CR will be given a sheet of paper with each of the following tests printed. The enumerator will explain the test and lead the CR through each section of the tests. Each test begins with the hardest problems and moves on to the lower levels if the respondent cannot successfully complete the level. The CR is marked at the level which he/she can do comfortably. **These tests are only for our study purposes and the children will not be judged on how well they do. It is very important to make the CR feel comfortable and to ensure that they are not under any pressure to perform.**

1. **Reading:** The ASER reading assessment tool consists of 4 levels: letters, words, a short paragraph (at a grade 1 level), and a longer "story" (grade 2 level). The child is marked at the highest level which he/she can do comfortably.
 - *Instructors begin with **Level 3, the Paragraph**, and have the student attempt to read it.*
 - *If they cannot read the paragraph, the instructor will lead them to try **Level 2, Words**.*
 - *If the student cannot do **Level 2**, they move to **Level 1***
 - *Each level on the assessment has instructions for what indicates successfully passing the level and what indicates that they failed the level.*

2. **Math:** The ASER Math tool consists of four levels: Number recognition (1-9), number recognition (11-99), two-digit subtraction with borrowing, and three digit by one digit division. The child is marked at the highest he/she can do comfortably.
 - *Instructors begin with **Level 3, Subtraction**, and have the student attempt to solve 5 of the equations mentally.*
 - *If they cannot complete 5 equations, the instructor will lead them to try **Level 2, Addition**.*
 - *If the student cannot solve 4 of 5 addition problems in **Level 2**, they move to **Level 1, Numbers**.*

- *Each level on the assessment has instructions for what indicates successfully passing the level and what indicates that they failed the level.*

It is essential that the CR these tests are done in private so that the CR feels like they are not under pressure to perform for family members or others that would like to watch. The enumerator should do their best to make sure that the respondent is relaxed and not worried about how they are going to perform. A friendly conversation with the child prior to testing always helps to create a more relaxed atmosphere.

7.11 Marriage and Relationships

Introductory Statement

The Marriage and Relationship section should be completed in privacy. It is interested in learning more about the attitudes towards and experience with marriage and relationships. For some respondents, this section may encourage them to share information that is very private or sensitive. It is imperative that all interviewers continue to be careful as they enter responses for this section. Most questions in this section will lead to another and create a unique skip pattern. Since there are so many different skip patterns in this section, this manual will not address each of them. It will only discuss the purpose of each question and any unfamiliar responses or questioning strategies.

The section has four parts:

1. Marital History
2. Knowledge and Opinions
3. Attitudes
4. Getting Married

Marital Status

If the CR is part of the **Young Cohort** (aged <13), skip to Q15. Otherwise, continue here.

Q1-3. These yes or no questions are interested in learning the CR's marital status.

The language used in these questions varies by country. Pay careful attention to the language that should be used in the country the survey is being conducted in. In Jordan, do not use language that suggests that the AF has lived with the partner before or without being formally married.

Q4-6a. This a series of questions asking for the age of the CR at the time her **first marriage** started, how long the CR knew his/her partner before they were married, the age of the CR when he/she as betrothed, and whether this partner is in the HH roster.

Q7-13. These questions ask about traditional marriage practices that may have been a part of the CR's marriage. Specifically, these questions ask about marriage payments, whether there was a broker, whether the marriage was forced or voluntary, and whether there were any co-wives in the marriage.

Q14-14b. These questions are interested in learning if the CR is still married to their partner.

Q15-15a. This question asks if the CR is aware of ever being promised in marriage and his or her age at the time.

Q16. **Only ask this question if the CR is female.** This question records whether the CR has or her parents have received a request from a suiter to marry her.

Q17-18. **These questions are asked of all CR respondents.** These questions ask whether the CR has ever been formally engaged or discussed this with their parents or other family members.

Marriages and Relationships, Knowledge and Opinions

If the CR is part of the **Young Cohort** (aged <13), skip to the read statement before Q20 (Attitudes).

Q19-19c. These questions inquire about the age that boys and girls can legally get married. These questions are asking about the CR's knowledge of when men and women can get married. Do not lead the CR to a particular response. Encourage the CR to give a response even if he or she is unsure.

Marriages and Relationships, Attitudes

Q 20-23. These questions are interested in learning whether the CR agrees, partially agrees or disagrees with several statements about relationships between boys and girls. Refer to **Section 7.2 Education – Different Opinions** for instructions.

Q24. Only ask for CR in the **Old Cohort**. This question asks about gender relations and obedience in a marriage.

Marriages and Relationships, Getting Married

If the CR has already been married or lived with a partner, skip to the next section.

Q25-25c. These questions ask about when the CR would ideally get married, their opinions about that ideal marriage, and their reasoning for not wanting to ever be married if that is what they want.

7.12 Sexual and Reproductive Health

CR Other Modules, Sexual and Reproductive Health

Introductory Statement

The Sexual and Reproductive Health section should be completed in privacy. If privacy cannot be ensured after appropriate measures are taken to try to obtain privacy, this section should be skipped IF the CR is a female and a male is in the room.

It is interested in learning more about the sexual and reproductive health of the core respondent, which will include bodily growth and development, puberty and menstruation, and fertility. This section, like the last one, asks the CR to share very private information that may cause embarrassment or discomfort. Consider this when selecting the location for the interview and when asking each question.

This section has three parts:

1. Source Info on SRH
2. Desired Fertility
3. Attitudes

Note that CRs in the younger cohort should skip to Q5 to begin this module.

Sexual and Reproductive Health, Sources of Info on SRH

Q1-2. These questions are interested in understanding how the CR learns about puberty and relationships.

Q3-3a. **Note that these questions are only asked to female CRs.** These questions are interested in learning more about the facilities that a CR's school may have for girls to use when they are menstruating. These resources may include a special room that girls can access, separate toilets, a spare uniform, menstrual hygiene products, bins, washing facilities, or another resource.

Q4-4a. These questions are interested in understanding whether or not the CR has heard of contraceptives. If the CR has heard of contraceptives, Q4a asks the CR to name any methods that they know of.

Sexual and Reproductive Health, Desired Fertility

Q5-5h. These questions ask about the CR's living children and desire to have children in the future. If the CR already has children, skip to Q5b. If the CR doesn't want to have children, skip to Q5h. Otherwise, continue with the questions and skip patterns, as indicated in the survey.

Sexual and Reproductive Health, Attitudes

Q6-11. These questions ask whether the CR agrees, partially agrees or disagrees with several statements about controlling adolescent behavior. See the **Section 7.2 Education – Different Opinions** for activity instructions. Note that if the CR is part of **Young Cohort**, skip to next section (**7.13 Violence**), after Q8.

7.13 Violence

Introductory Statement

It is of critical importance that the Violence section of this survey be conducted in complete privacy. If privacy cannot be ensured after appropriate measures are taken to try to obtain privacy, this section should be skipped for all CRs.

Additional precautions should be taken to ensure that no one other than the CR and interviewer are in the interview space. This section of the survey is interested in learning more about the CR's attitude towards and exposure to several different types of violence. The questions in this portion of the survey are sensitive could be very difficult for the respondent to answer. It is important to remain professional and to react neither positively nor negatively to responses given by the respondent.

This section has four parts:

1. Attitudes towards violence
2. Peer-violence scale
3. Physical violence at home
4. Provided support

Violence, Attitudes Towards Violence

If CR is part of the **Young Cohort** (aged<13), skip to **Q5- Peer-Violence Scale**.

Q1-5. These questions ask whether the CR agrees, partially agrees or disagrees with several statements about violence. See **Section 7.2 Education – Different Opinions** for more activity instructions. Specifically, these questions ask the CR about their opinions on what is acceptable and whether others should interfere when violence is happening between a husband and wife.

Violence, Peer-violence scale

Q 5. This question asks whether the CR has experienced any of the 6 different forms of negative treatment by peers in the last 12 months prior to the interview date. If so, record whether this bullying or violence has occurred once or more than once.

If the respondent says “Never,” then skip Question 5a. In SurveyCTO, the program will automatically activate the correct question.

Q5b. This question asks the location of the event. The respondent will indicate whether it happened in school, out of school, or both. The event is defined as occurring in school if it happens during school hours, or on school premises just before or after the school day begins or ends.

Q6. This question asks if the respondent treated *others* in any of these ways in the past 12 months prior to the interview date. Record his or her response.

Q7. This question is asked only if the respondent reports having experienced at least one of the forms of peer violence in question 5. Q7 asks if the CR has spoken to anyone about the treatment by peers. If the respondent indicates “Yes,” ask question 7a. If the respondent indicates “No,” move to Q8.

Q7a. If the respondent indicates that he or she spoke with someone about treatment by their peers, ask them who they spoke with. For this question, select as many individuals as the respondent indicates. For example, if the respondent indicates that s/he spoke to her or his parent, friend, and teacher, tick the box next to each of those responses. If the respondent names an individual that does not fit into one of the pre-set categories, select “Other” and specify who the individual is. It is important to specify who the “Other” person is. Do not leave this blank.

Violence, Physical Violence at Home

Q8-13. These questions ask how often the respondent experienced or observed violence from a parent or other adult in his or her household in the past 12 months. If violence occurred, specify whether once or more than once, and continue. If no violence at home after reading through all of the options, skip to Q15.

Q14-14a. These questions ask whether the CR has talked to anyone about the violence, and if so, who. As in the Q7a above, select as many individuals as the respondent indicates. For example, if the respondent indicates that s/he spoke to her or his parent, friend, and teacher, tick the box next to each of those responses. If the respondent names an individual that does not fit into one of the pre-set categories, select “Other” and specify who the individual is. It is important to specify who the “Other” person is. Do not leave this blank.

Q15. This question asks about the main form of discipline the CR experiences from his or her parents when the CR does something wrong.

Q 16a-m. For each of the locations listed in the survey, record whether the CR feels safe or not.

Q17. This question asks about knowledge of support services for violence. The question is worded differently if the CR is a female or if the CR male.

7.14 Financial Inclusion and Economic Empowerment

Financial Inclusion and Economic Empowerment

Introductory Statement

The Financial Inclusion and Economic Empowerment section should be completed in privacy. It is interested in understanding more about the different ways that the CR may interact with money. We are interested in learning how they might obtain it, how they save it, how they spend it, and who they think should have access to it.

This section has two parts:

1. Access to Money
2. Credit and Savings

Financial Inclusion and Economic Empowerment, Access to Money

Q1, 1a-1b. These questions ask whether the CR’s controls their own money, how it is earned and how it is spent.

Q2. This question asks if the CR has a way to save money, or other valuable assets for the future. Savings for the future may include a bank account, a savings group, cash, jewelry, or another method of saving.

Q3. This question asks what the CR aspires to do when she or he is an adult. Use SurveyCTO to select from the list of occupations to determine what the CR wants to be doing when he/she is older.

Q 4-8. These questions are interested in learning whether the CR agrees, partially agrees or disagrees with several statements about adolescent girls’ and women’s role in earning and saving money. The CR will respond to these statements by pointing to cards that express how they feel. See **Section 7.2 Education – Different Opinions** for instructions. Note that Q7 and Q8 are skipped for the younger cohort CRs.

Financial Inclusion and Economic Empowerment, Credit and Savings

Q 9,9a-b. These questions ask about borrowing cash or obtaining a loan from an informal source, such as an informal lender, friends or relatives, or informal credit/savings group). If the CR is unable to borrow or take a loan from an informal source, skip Q10.

Q 10. This question asks about the CR's own access to bank accounts. Note that this question is not asked to CRs who live in camps, where access to banking is limited.

Q11-12b. These questions ask about the CR's own saving behavior and any money the CR has saved or set aside in the last 12 months.

7.15 Information and Communication Technologies

Introductory Statement

The Information and Communication Technologies section should be completed in privacy. It is interested in learning about how the CR receives information (i.e., newspaper, radio or internet). This module is designed to gather information on what sorts of technologies the respondent uses and how often. There are questions to gather information on three topic areas:

1. Access to Information
2. Access to a Phone
3. Access to a computer and Internet Use

Access to Information

Q1-4. These questions are interested in learning how often the CR used different types of media, including newspapers, radio, television, and computers. See **Section 6.14 Information and Communication Technologies – Access to Information** for details on the response options.

Access to a Phone

Q5 -9b. These questions ask about the CR's phone ownership, use, and who he or she primarily speaks with on the phone or by text.

Q 10. This question asks about upsetting text messages that the CR may have received in the 12 months, prior to the interview.

Access to a Computer and Internet Use

The remaining questions in this section are about internet use.

Q11 This question determines whether the rest of the questions in this section are answered. If the CR responds 'no' to this question, please probe and be sure that the CR has not forgotten about using the internet.

Q12-14. These questions are only asked to the **Old Cohort CRs**. These questions ask if the CR is able to go online when s/he want or need to, how often the CR uses the internet, and how often the CR does particular things online.

Q15. Similar to Q10, this question wants to know if the CR has been upset by something that happened online. Note that Q10 asks about experience via text message and this question asks about experiences online.

7.16 Educational Testing 2

CR Other Modules, Educational Testing

Introductory Statement

The Educational Testing section should be completed in privacy. This second educational testing module administers the **Raven's Progressive Matrices cognitive test**. The purpose of this tests is to understand the level of knowledge and cognitive skills of the respondent relative to his or her peers. These are standard tests that have been implemented in many countries around the world, and it is crucial that they are implemented exactly as designed.

Raven's Progressive Matrices

For this test, the core respondent will be shown a series of pictures of patterns. Each pattern will have a piece missing from the pattern. The CR will be shown six possible pieces that might complete each picture and asked to select the piece that best completes the picture. Practice with the CR, allowing only one minute to complete the practice exercise. The CR should be given 12 minutes to complete the exercise, so a timer should be set. Please record the chosen response. Remember to gain the CR's permission before starting the test.

It is essential that the CR these tests are done in private so that the CR feels like they are not under pressure to perform for family members or others that would like to watch. The enumerator should do their best to make sure that the respondent is relaxed and not worried about how they are going to perform. A friendly conversation with the child prior to testing always helps to create a more relaxed atmosphere.

7.17 Photo of Drawing

In this section, we will ask young CR's to draw a self-portrait. If the CR is in the older cohort (older than 13), skip this activity. Based on the number of the CR's ID code, they will be asked to draw a portrait either at the middle or end of the survey.

When the SurveyCTO tablet prompts the enumerator (either after section 'Resilience and Coping' or at the end after the photo of the ID), the enumerator will get out a sheet of paper and the colored pencils. They would then read this script the young CR.

Enumerator script:

"Now we would like you to ask you to draw a picture of yourself on this piece of paper using colored pencils. For the drawing, please draw yourself in winter when it is cold outside. You will have 15 minutes to draw your self-portrait."

Procedures after the CR finishes the portrait:

After the CR finishes, the enumerator would write the CR's ID code on the piece of paper and take a picture of it using the tablet.

The portraits should be collected by the supervisors at the end of each day and then the supervisor needs to drop them off at the Mindset office regularly for safe storage.

7.18 Conclusion & Photo of ID

Photo of ID

If the AF has consented, take a photograph of the CR's ID card.

CR Conclusion

Q1-1a. These questions want to know if the CR decided to end the study before it was finished and why.

Q2. Record the time when the questioning ended.

Q3-4. Record your interviewer ID number and select your name from the drop-down list on SurveyCTO.

Q5-6. Record the language and the CR's ability to communicate it.

Q7-8a. Record information about who was present during the questioning, including other survey enumeration team members or any other individuals.

Q9-9a. In this question, the interviewer should note whether they are confident, somewhat confident, or not very confident in the quality and truthfulness of the respondent's responses for this interview. The interviewer should record their honest opinion about the quality of this study. There is no "good" or "bad" response and this does not reflect positively or negatively on the interviewer. It is important to record honest opinions, so that we make sure that we collect the best possible data.

Q10-11. Record information about the survey location.

Thank the respondent for their time and end the interview.

8. School Questionnaire

The school survey is administered to primary and secondary schools near the Makani centers where interviews will be conducted. Including the coversheet, the school survey has six parts:

1. Coversheet and Interview Start
2. Basic Information
3. School Policies
4. School Programs
5. Activities
6. Enrollment and Exam Scores

School Coversheet

At the start of the interview, fill out the coversheet, indicating the location of the interview, the date and time, and the name of the enumerator.

In addition, record basic information about the respondent, including his or her position, gender, and age.

Basic Information

These questions collect basic information about the school level, language of instruction, and facilities. There are nine subparts to this section:

1. School type, level, and language of instruction
2. School schedule
3. School teachers and staff
4. School Board Management Committee/School Board (as applicable)
5. School location and year of establishment
6. School construction, infrastructure, and facilities
7. Availability of computers
8. Questions related to school dropout for girls and boys
9. Presence/availability of school counselors

School Policies

This section asks questions about school policies and fees. There are 3 subparts:

1. Tuition and fees
2. Punishment and sanctions
3. Policies about pregnant and/or married students

School Programs

This section asks questions about programs and clubs available at the school. There are four types of programs asked about:

1. Girls Only and Gender Clubs
2. Sexual and Reproductive Health Programming

3. Special needs education classes for students with disabilities
4. Makani, including any teaching of Makani content and/or referrals to the Makani program

Activities

This section asks questions about any leisure/recreational activities offered by the school. The survey asks about:

1. Facilities available for leisure activities
2. Access to sports fields for students of different ages and genders
3. Existence of school canteen or shop
4. Existence of school feeding program or free snacks

Enrollment and Exam Scores

This section collects information on the number of students in each grade level of the school, separated by boys and girls. In addition, it collects information on exam scores for the Tawjihi, the major exam administered in secondary schools.

Finish

Conclude the survey; record the time.

9. Submission of Completed Surveys

Once the questionnaire is completed, please hit submit to record answers automatically. You will have been provided with a unique code identifying you as a fieldworker, which will record your identity and the date and time submitted automatically. There will be a second date and time submitted once you obtain internet connection and the answers enter the SurveyCTO system.

You should submit **only after you have completed and checked the questionnaire thoroughly.** Submitting the questionnaire shows that you have checked for any problems and solved all your doubts, and therefore, the questionnaire has been completed. The submission is a sign that you take responsibility for the quality of the questionnaire. You must be clear about all the information you collected before handing in your tablet to your supervisor and, most importantly, before leaving the site.

Once the form is submitted, the field team cannot open it, the office data cleaning team are responsible for validating answers.

REMEMBER: YOU MUST NEVER, UNDER ANY CIRCUMSTANCE MAKE CHANGES IN A COMPLETED QUESTIONNAIRE WITHOUT CONSULTING WITH YOUR SUPERVISOR OR RETURNING TO THE HOUSEHOLD TO ASK THE RESPONDENTS THE SAME QUESTIONS AGAIN.

10. Quality Control

Quality control is critical for ensuring high quality data. Quality control will happen in a number of important ways throughout the data collection process.

10.1 Supervisor Role

You should always follow the instructions given to you by your supervisor, who will be in permanent contact with the Field Coordinator. S/he will assign your work at the beginning of fieldwork in each governorate. In order to provide clearance that the data collected is clean, the supervisor will carry out the following checks in the field:

- S/he will conduct 1 spot check on a daily basis by performing random visits to some of the households that you have already interviewed to make sure that you went to the correct addresses and to re-ask a few questions in the questionnaire as a basis to assess the reliability of the data we are collecting.
- S/he will observe 2 or more of your interviews per week to evaluate your method of asking questions. You will not be informed of this in advance. Supervisors will exit the interviews once the enumerators reach the sensitive sections particularly for the CR and AF surveys.
- Every day s/he will meet with the team to discuss the work and will make regular reports to the Fieldwork Coordinator on the progress of the work.

Your supervisor is the link between you and Mindset, and you should work closely together. Just as you will receive instructions from her/him, you must inform her/him of any difficulties or problems that you encounter.

10.2 Back Checks (Telephone control)

Back-check staff are responsible for quality assurance and back-check of responses. We will back-check 30% of respondents. The back-check calls are done based on the following criteria:

- Random selection of respondents to be re-contacted to ensure that the data provided are accurate. Key questions from the questionnaire form will be asked again. Back-checks are also an important check on the performance of enumerators. Results from the back-checks will feed into the performance assessments of each enumerator. Back-checked numbers will be selected from cases that have not been attended by the field supervisors and not verified (listened to).
- Back-check of responses that have been highlighted by the data processing expert for missing/ inconsistent/ illogical/ compromised data (which is done on 100% of the sample).

10.3 Verification (Audio monitoring):

Back-check staff are also responsible for listening in to audio recordings of the interviews to ensure that the data entered is identical to the responses received. We will verify 100% of the sample for the first 2 weeks of data collection to control expected quality issues, and then we will turn on a full audit for a randomly sampled 40% of interviews. The verifications are done based on the following criteria (after the first 2 weeks of fieldwork):

- Random selection of interviews to be listened to, to ensure that the data provided are accurate. The results from the verification will feed into back-checks as well as the performance assessments of each enumerator. Interviews to be verified will be selected from cases that have not been attended by the field supervisors and not back-checked.
- Verification of selected questions that were particularly problematic in the pilot for 100% of the interviews until resolved.
- Verification of responses that have been highlighted by the data processing expert for missing/ inconsistent/ illogical/ compromised data.

10.4 Time controls:

- Mindset will set a minimum number of seconds an interviewer must spend on certain questions. This will ensure that sufficient time is spent on each question. It will also limit lumping.

10.5 Weekly Forms

GAGE Tracking Update – This form should be used to track the number of interviews that have been completed, refused, or any other outcome.

GAGE Weekly Progress Report – This form should be used to track what has been completed, what we intend to complete the following week, if we expect to encounter any delays, etc.

11. Data Cleaning and Security

11.1 Data Cleaning:

Data cleaning occurs on an on-going basis and will be ongoing throughout and post fieldwork.

- Common errors are collected by the data processing officer and relayed on a daily basis to the field team.
- Data cleaning and checking involves item-by-item identification of errors and inconsistencies in the data identified. The checks include, but are not limited to:
 - Reviewing the data file to ensure it is structurally sound, and consistent with the codebook, such that all variables included in the codebook are present in the dataset, of the right type, and contain matching values, including administrative variables and metadata
 - Identifying missing data that must be captured through follow-up interviewing
 - Conducting checks for anomalies in the data, including:
 - Checking of the eligibility for interview of the respondent according to instructions in the questionnaire
 - Checking that all values in a variable are within the variable's defined range
 - Outlier interview durations and daily number of interviews per interviewer
 - Overlapping interview times conducted by the same interviewer
 - Checking the metadata to verify the implementation of the sampling plan such that the location where data was collected matches the sampling plan
 - GPS coordinates of surveyed areas are within the country where the survey was conducted
 - Duplicate GPS coordinates for households
 - Interviews that are identical or respondents who have been interviewed twice (duplicate cases)
 - Cases that have the same answers across a series of questions regardless of the interviewer (pattern response)
 - Interviewers that had the same responses for particular questions across all of his/her interviews (substantive response bias)
 - Bulk-editing: Mindset will run frequencies on 100% of the data and create cross tabulations to identify errors and inconsistencies. This editing will occur on a rolling basis.
 - The production of the dataset(s) may include three or more rounds of data checking and cleaning in close consultation with MSI/MESP data analysts to

arrive at the final dataset(s) that passes all quality checks and is suitable for public dissemination.

11.2 Data Security

It is critical to prevent unauthorized access to the data; therefore, the key steps to ensure data security are the following:

- No access to tablet settings
 - o Interviewers cannot access tablet settings by the Applock application
 - o The application prevents any tampering with recordings/ geolocations settings
- Protected storage
 - o Data stored in each individual SurveyCTO interview file is encrypted as per client request
 - o All interview files are made invisible on the tablets once submitted by the interviewers
 - o All data will be stored on secure CTO servers
 - o Data can only be read by the data processor and technical adviser
 - o Data is backed up on Drop Box business accounts
 - o Client has full access to the CTO account and can take back-ups as required

Please refer to the document in Appendix 3 for additional detail on the [**Mindset Data Protection Policy**](#).

Appendix 1: GAGE Child Protection Policy

A. About this Policy

1. The GAGE programme is committed to operating in accordance with the highest ethical and legal standards. The integrity of the GAGE Team, and those with whom we work, is critical to our success. This Child and Vulnerable Adult Protection Policy (the “Policy”) is drafted with these obligations in mind.
2. The intention of this Policy is to ensure that children and vulnerable adults are protected from harm when participating in GAGE Projects or when interacting with the GAGE Team.
3. This Policy sets out a series of clear guidelines that all GAGE Team Members (defined below) should adhere to when interacting with children or vulnerable young adults.

B. Who is Covered by this Policy?

1. This Policy applies to all ODI and GAGE Consortium Partner employees, volunteers, interns, trainees, secondees, contractors and consultants working or involved in the GAGE programme in any capacity. References to **GAGE Team** in this Policy include all these persons.

C. ODI Team

1. This section C applies to **ODI Staff** (i.e., any employees, volunteers, interns, trainees, secondees, contractors and consultants of ODI working or involved in the GAGE programme) only.
2. Should any aspect of this Policy conflict with any general ODI policy, or if there is any ambiguity associated with this Policy, ODI Staff must raise the matter with both the GAGE Operations and Partnerships Manager and ODI’s Business Services Manager, who will decide on the appropriate course of action.

D. Children and Adults

1. A child is defined for the purposes of this policy as an individual under 18 years of age.
2. A vulnerable adult is defined for the purposes of this policy as an individual aged 18 or above who is vulnerable to abuse or exploitation as a result of particular individual characteristics.
3. Individuals may be classified as vulnerable for a number of reasons, such as:
 - mental health issues;
 - disability;
 - learning difficulties or mental impairment;
 - brain damage;
 - substances misuse;
 - subjected to violence or sexual violence; or

- extreme poverty.

E. Core Principles

1. When interacting with children and vulnerable adults, GAGE Team Members must never:
 - Physically or verbally assault or abuse children or vulnerable adults in any way;
 - Develop relationships with children or vulnerable adults that could be deemed emotionally exploitative or abusive, or act in ways intended to shame, threaten, humiliate, belittle, coerce or otherwise emotionally harm or manipulate children or vulnerable adults;
 - Develop physical or sexual relationships with children or vulnerable adults or behave in a manner which is inappropriate or sexually provocative;
 - Act in ways that may place children or vulnerable adults at risk of abuse from others;
 - Use language, make suggestions or offer advice which is inappropriate, or offensive to children or vulnerable adults;
 - Do things for children or vulnerable adults of a personal nature that they can do for themselves;
 - Condone or participate in behaviour of children or vulnerable adults which is illegal, unsafe or abusive; or
 - Discriminate against or show differential treatment or favour particular children or vulnerable adults to the exclusion of others.

F. Obligations

1. All GAGE Team Members that have any interaction with children and / or vulnerable adults must read, understand and comply with this Policy. GAGE Consortium Partners are responsible for ensuring this.
2. All GAGE Team Members have a responsibility to mitigate the risk of harm to children and vulnerable adults involved in the GAGE Project. GAGE Team should be particularly cautious when introducing new activities and working with new partners.
3. GAGE Team Members should not hesitate to contact the GAGE Operations and Partnerships Manager if they have any comments or queries about this Policy.

G. Team Screening

1. The Consortium Partner should have appropriate interview and screening processes in place to ensure that GAGE Team are suitable to interact with children and / or vulnerable adults.
2. The GAGE Programme Office may require that the consortium partner undertake additional screening measures in cases where it considers it necessary.

H. Conducting Research

1. This Policy should be read in conjunction with the GAGE Research Ethics Policy.

2. The safety of the child / vulnerable adult is paramount when setting up interviews. The following general good practice should be adhered to by GAGE Team Members conducting interviews with children and / or vulnerable adults:
 - The location in which the interview is to be conducted should be safe in the assessment of both the interviewer and the interviewee. A risk assessment may need to be conducted if the interview is to take place in a high-risk setting. Transportation to and from the interview location should also be considered.
 - If a child or vulnerable adult is required to travel, they must be accompanied by an adult chaperone (such as a parent, caregiver or trusted adult).
 - GAGE Team Members should ensure that any physical contact with children / vulnerable adults should never cross personal boundaries or constitute an invasion of privacy.
 - GAGE Team Members should use positive, non-violent methods to manage children's behaviour during research process and accept responsibility for their personal behaviour.
 - When photographing or filming children or vulnerable adults, GAGE's ethical guidelines on multimedia content gathering should be followed at all times.

I. Concerns Relating to Non-GAGE Team

1. If members of the GAGE Team have any concerns relating to Non-GAGE Team (i.e., parents or carers of children or vulnerable adults), they should contact the GAGE Operations and Partnerships Manager who will advise on how best to proceed.

J. How to Raise a Concern

1. GAGE Team Members should raise any concerns they have about the safety of a child or vulnerable adult to the GAGE Operations and Partnerships manager as a matter of urgency.
2. If the GAGE Operations and Partnerships manager does not respond within 24 hours, please contact the GAGE Project Director.
3. Every concern reported will be documented in an 'Incident Report Form' which can be found at Schedule 1 of this Policy.

K. Training and Communication

1. The GAGE Programme Office may require GAGE Team Members to attend training on this Policy.
2. GAGE's approach to the protection of children and vulnerable adults should be communicated to all suppliers and contractors at the outset of the relationship with them and as appropriate thereafter.

L. Breaches of this Policy

1. ODI may terminate any GAGE Consortium Partner's involvement in the GAGE programme if it (or any of its Team) breach this Policy.
2. The GAGE Programme Office may also inform relevant external authorities of an incident where appropriate and in the best interests of the child / vulnerable adult.

M. Contacts

Name	Contact Information
Caroline Spencer GAGE Operations and Partnerships Manager	c.spencer@odi.org.uk [number redacted]
Nicola Jones GAGE Director	n.jones@odi.org.uk

Schedule 1 – Incident Reporting Form

Child / young person's details

Name (contact details)	
Date of birth	Gender
Ethnicity	
School name	
School address	
Person with parental responsibility (address and phone number)	

The incident

Describe briefly the facts of the incident or concern. Please record with whom you spoke and when.

--

Contextual information

Is there anything you have observed that might assist in understanding the concerns?

--

What action has been taken internally to support the young person?

--

What action (if any) has been taken internally?

--

Have the young person's parents or carers been informed?

Yes/No

Has the young person/parent or carer given their consent for you to share the information?

Yes/No

If they have not consented, please state why a decision has been made to override this.

--

Which external agencies (if any) have been informed?

Yes/No

If a referral has been made to children's social care – has a copy of this report been sent to them within 24hours?

Yes/No

Has the incident been recorded promptly and stored safely? Yes/No

Yes/No

Please return this form to – the GAGE Operations and Partnerships Manager

Appendix 2: Referral Form

Referral Form regarding disclosure of violence or abuse during GAGE research

UNHCR ID number: _____

Person of Concern's name: _____

Year of birth: _____

Address: _____

Tel: _____

Child Consent for Referral Taken (Separate Form) – YES/NO

Parental Consent for Referral Taken (if deemed appropriate) (Separate Form) - YES/NO

Type of Referral (Circle type of referral)

- Physical violence
- Sexual violence or exploitation
- Impending child marriage
- Worst forms of Child Labour
- Unaccompanied and Separated Children
- Children in conflict with the law
- Children associated with armed forces and armed groups
- Severe violence in schools and domestic violence
- Other (explain)

Please write a short overview of the case (including information shared by person of concern, including how the case was identified, where the case was identified, whether the case had been referred to other service providers earlier).

Please describe the actions taken by GAGE researchers, including name of interviewer and who the disclosure was reported to (e.g. GAGE Coordinator).

Mindset Data Protection Policy

Below are the data protection policies that Mindset abides by. It should be noted that Mindset abides by its clients' data protection policy and where lacking relies on the below guidelines.

In the case of handling personal data of individuals, Mindset:

- obtains and processes personal data fairly;
- keeps it only for one or more specified and explicit lawful purposes;
- processes it only in ways compatible with the purposes for which it was given initially;
- keeps personal data safe and secure;
- keeps data accurate, complete and up-to-date;
- ensures that it is adequate, relevant and not excessive;
- retains it no longer than is necessary for the specified purpose or purposes;

Handling of data:

- Access to all data stored (whether collected or supplemented by the client) and to hardware and software managing and containing the data is restricted to Mindset's authorized staff. No staff that has no function on the data has access to it.
- Passwords used to access PCs, applications, databases, etc. should be of sufficient strength to deter password cracking or guessing attacks.
- Personnel who no longer work in Mindset or no longer work on a certain project will be immediately removed from mailing lists and access control lists.
- Contractors, enumerators, consultants and external service providers employed by Mindset also abide by Mindset's data protection guidelines.
- Use unique user IDs and passwords that cannot be easily guessed;
- Change passwords often (every month) to ensure that only current project members can access data;
- Provide access to data files through a centralized process; (one focal point, through the technical advisor working on the project who directs the data to other two members only);
- Evaluate and limit administrator access rights;
- Ensure that outside wireless devices cannot access system's network;
- Maintain up-to-date versions of all software and media storage devices;
- Keep updated anti-virus protection on every computer; and use a firewall and intrusion detection software to monitor access for internet connected storage- we use Kaspersky internet security

- Use encryption, electronic signatures, or watermarking to keep track of authorship and changes made to data files;
- Regularly back up electronic data files (both on and offsite) and create protected copies;
- Ensure that data are properly destroyed. 9 months for electronic data and 6 months for paper trail. Thoroughly dispose, destroy, or delete study data and documents in accordance with predetermined timeframes for storage and inquiries.
- Use a unique subject code on data documents (e.g., completed questionnaire) instead of recording identifying information. Keep a separate document that links the code to subjects' identifying information locked in a separate location and restrict access to this document (e.g., only allowing primary investigators access).
- Limit those who have access to identifiable information to three staff members only. They are full time staff and have password-protected accounts that give them access to the data.
- Securely store data documents within locked locations.
- We use SurveyCTO for our data collection. This application uses Amazon Web Services for hosting, which is a very secure hosting service.
- We require our field staff to submit the data by end of work day. The supervisor also ensures that the data are submitted.
- All our staff sign legally-binding non-disclosure agreements.

Email Use:

- When personal information is being transmitted internally or externally using email, encrypted files can strictly be used.

Laptops and Other Mobile Storage Devices:

- All portable devices should be password-protected to prevent unauthorized use of the device and unauthorized access to information held on the device.
- Personal, private, sensitive or confidential data should not be stored on portable devices. In cases where this is unavoidable, all devices containing this type of data must be encrypted.
